

Getting Started with Kubernetes

Arun Gupta, @arungupta
VP Developer Advocacy, Couchbase

Kubernetes Refcard

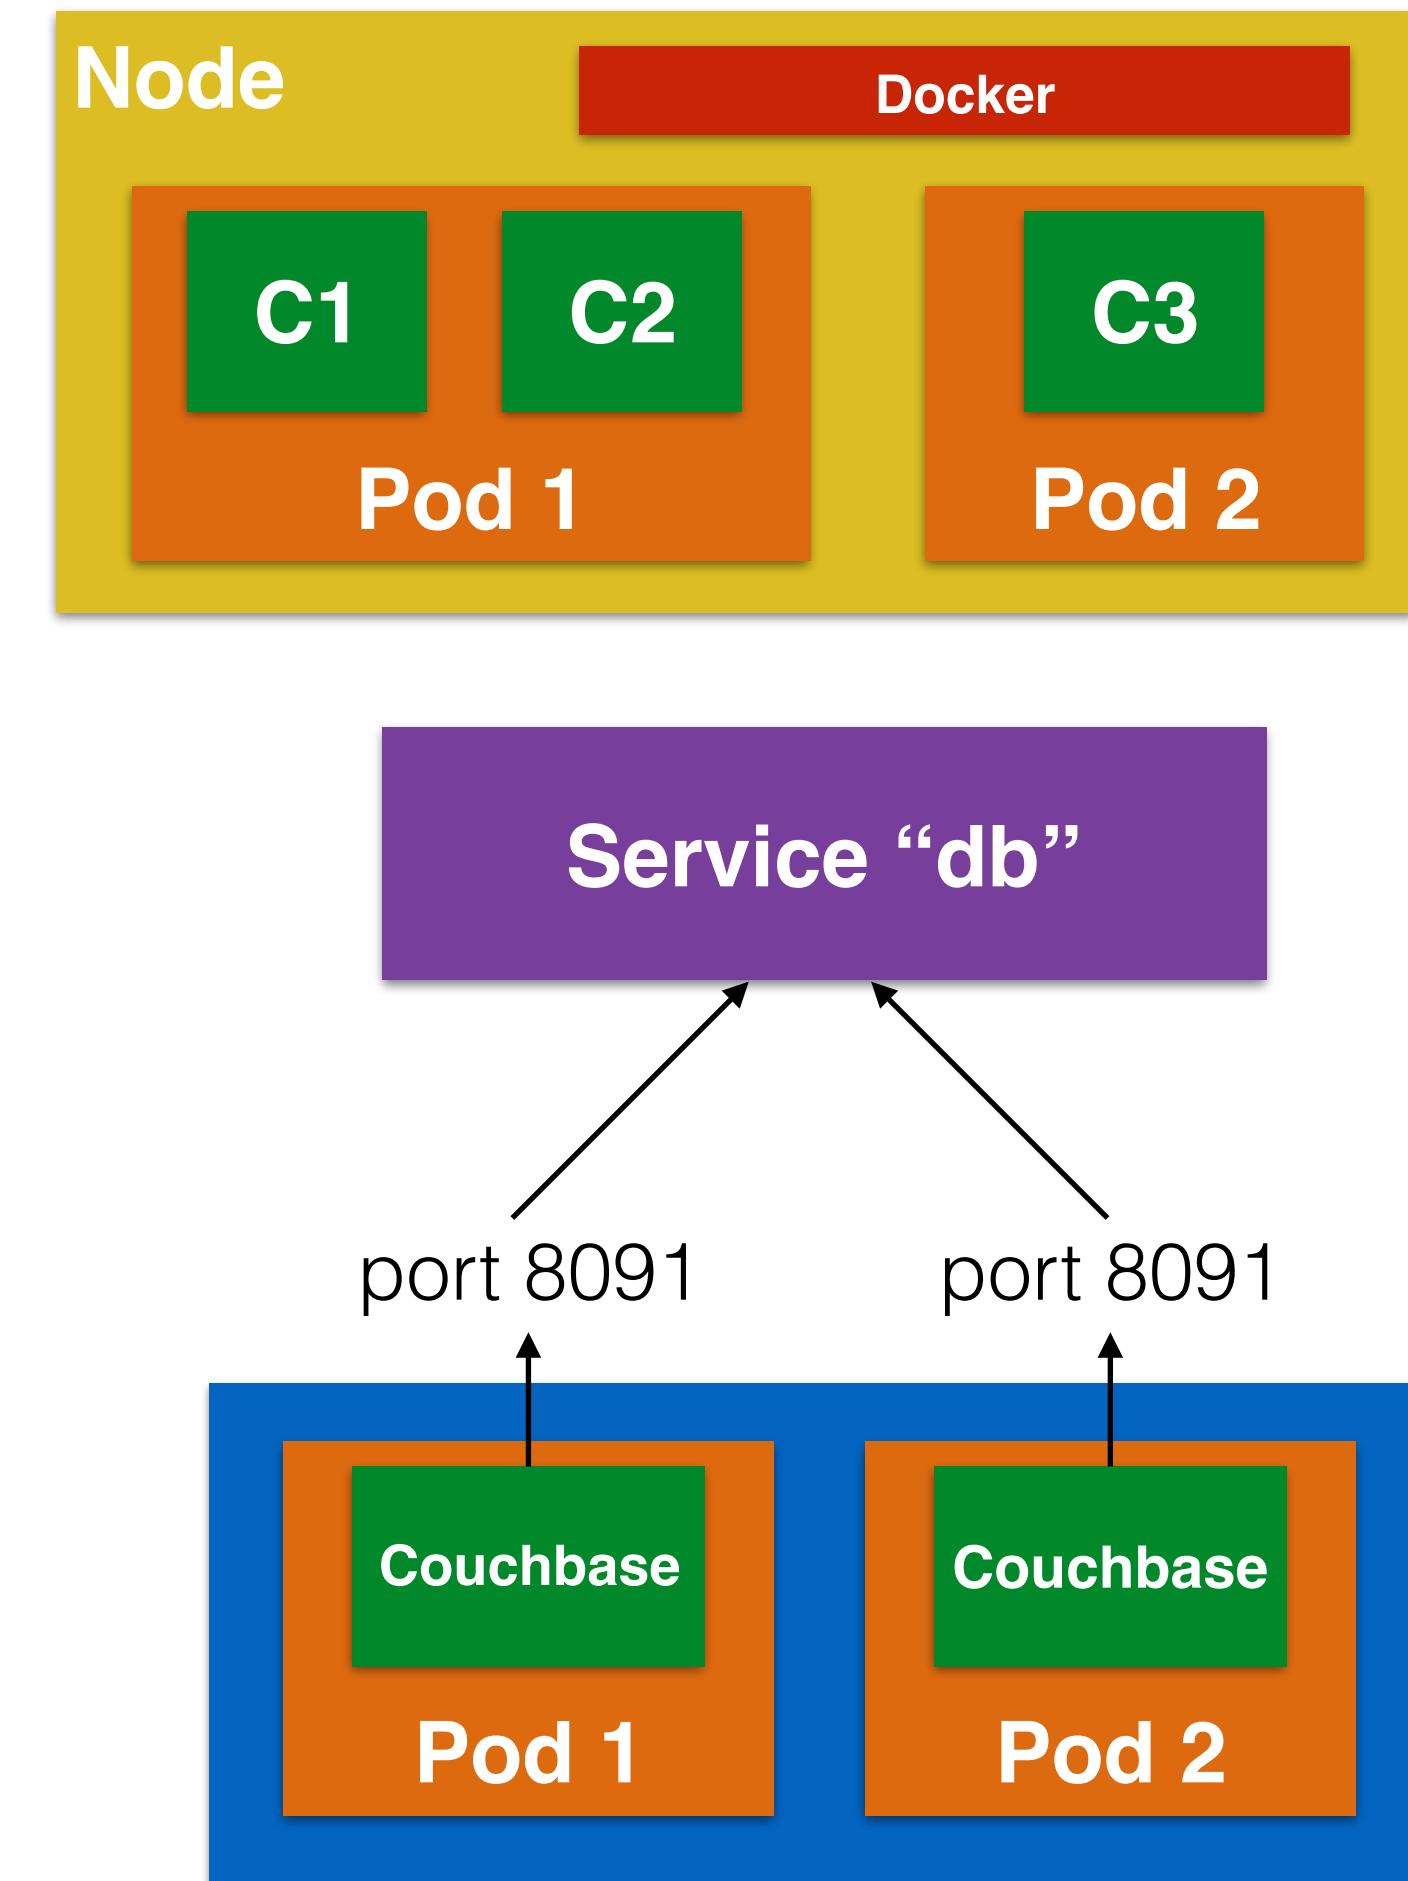

- ADD PICTURE

Kubernetes

- Open source orchestration system for Docker containers
- Provide declarative primitives for the “desired state”
 - Self-healing
 - Auto-restarting
 - Schedule across hosts
 - Replicating

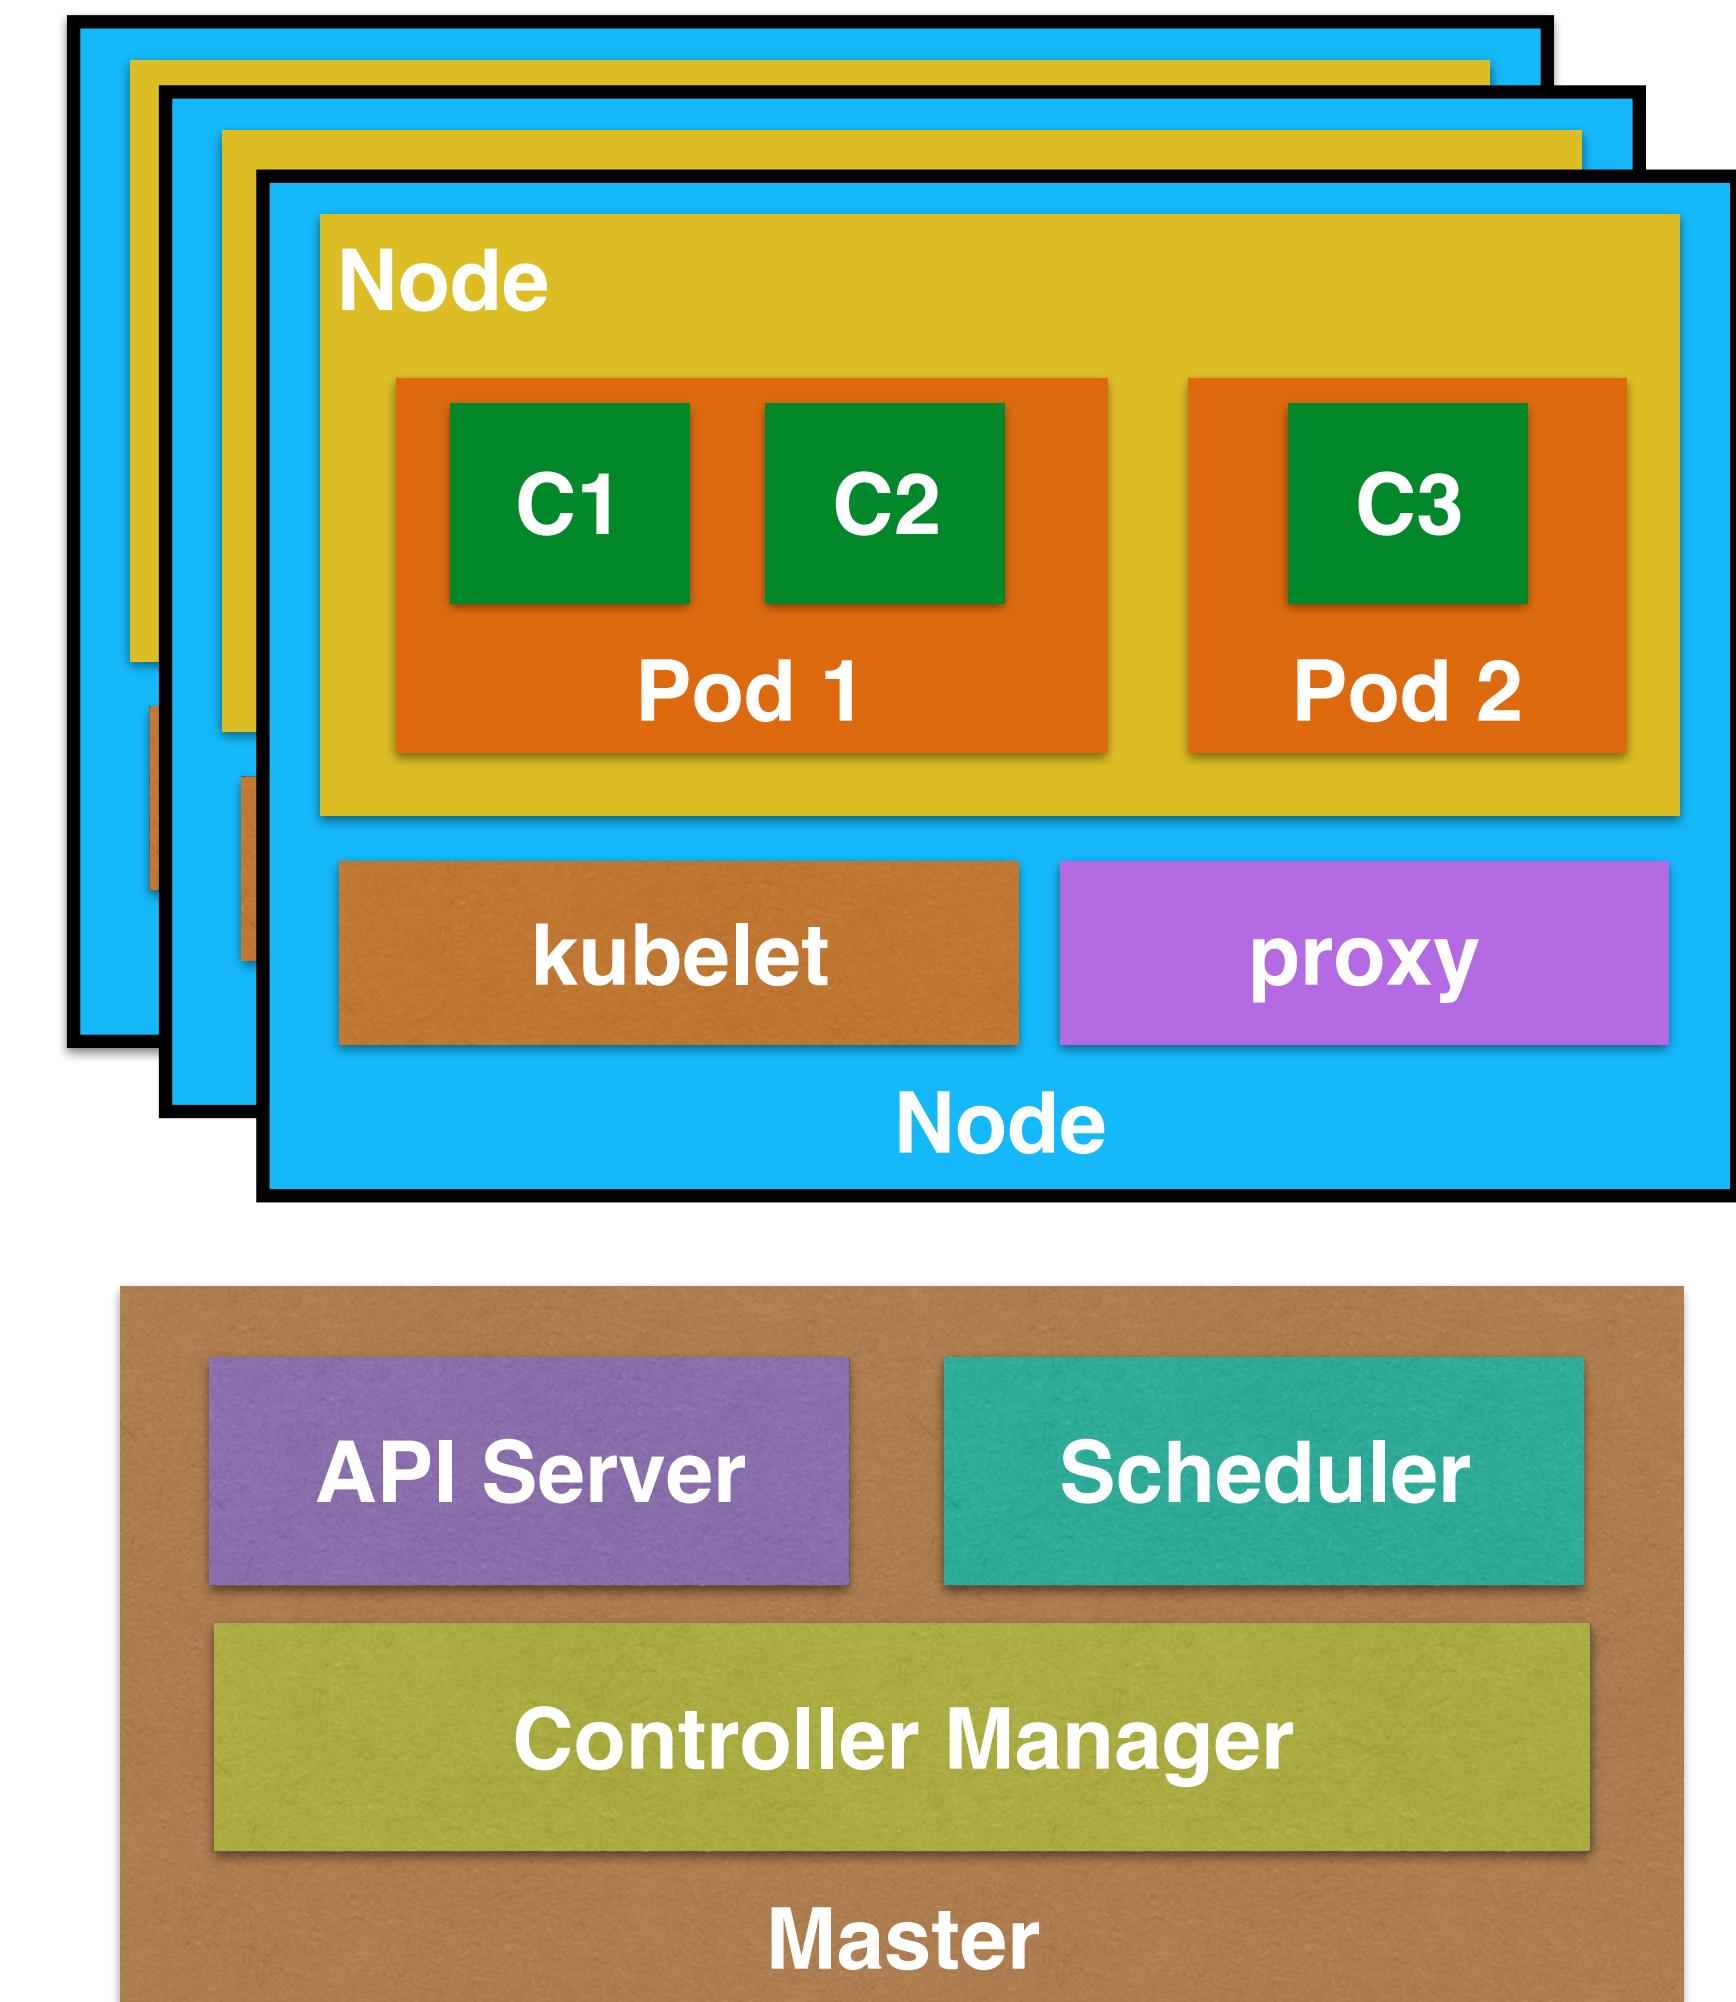

Concepts

- **Pods**: collocated group of Docker containers that share an IP and storage volume
- **Service**: Single, stable name for a set of pods, also acts as LB
- **Label**: used to organize and select group of objects
- **Replication Controller**: manages the lifecycle of pods and ensures specified number are running

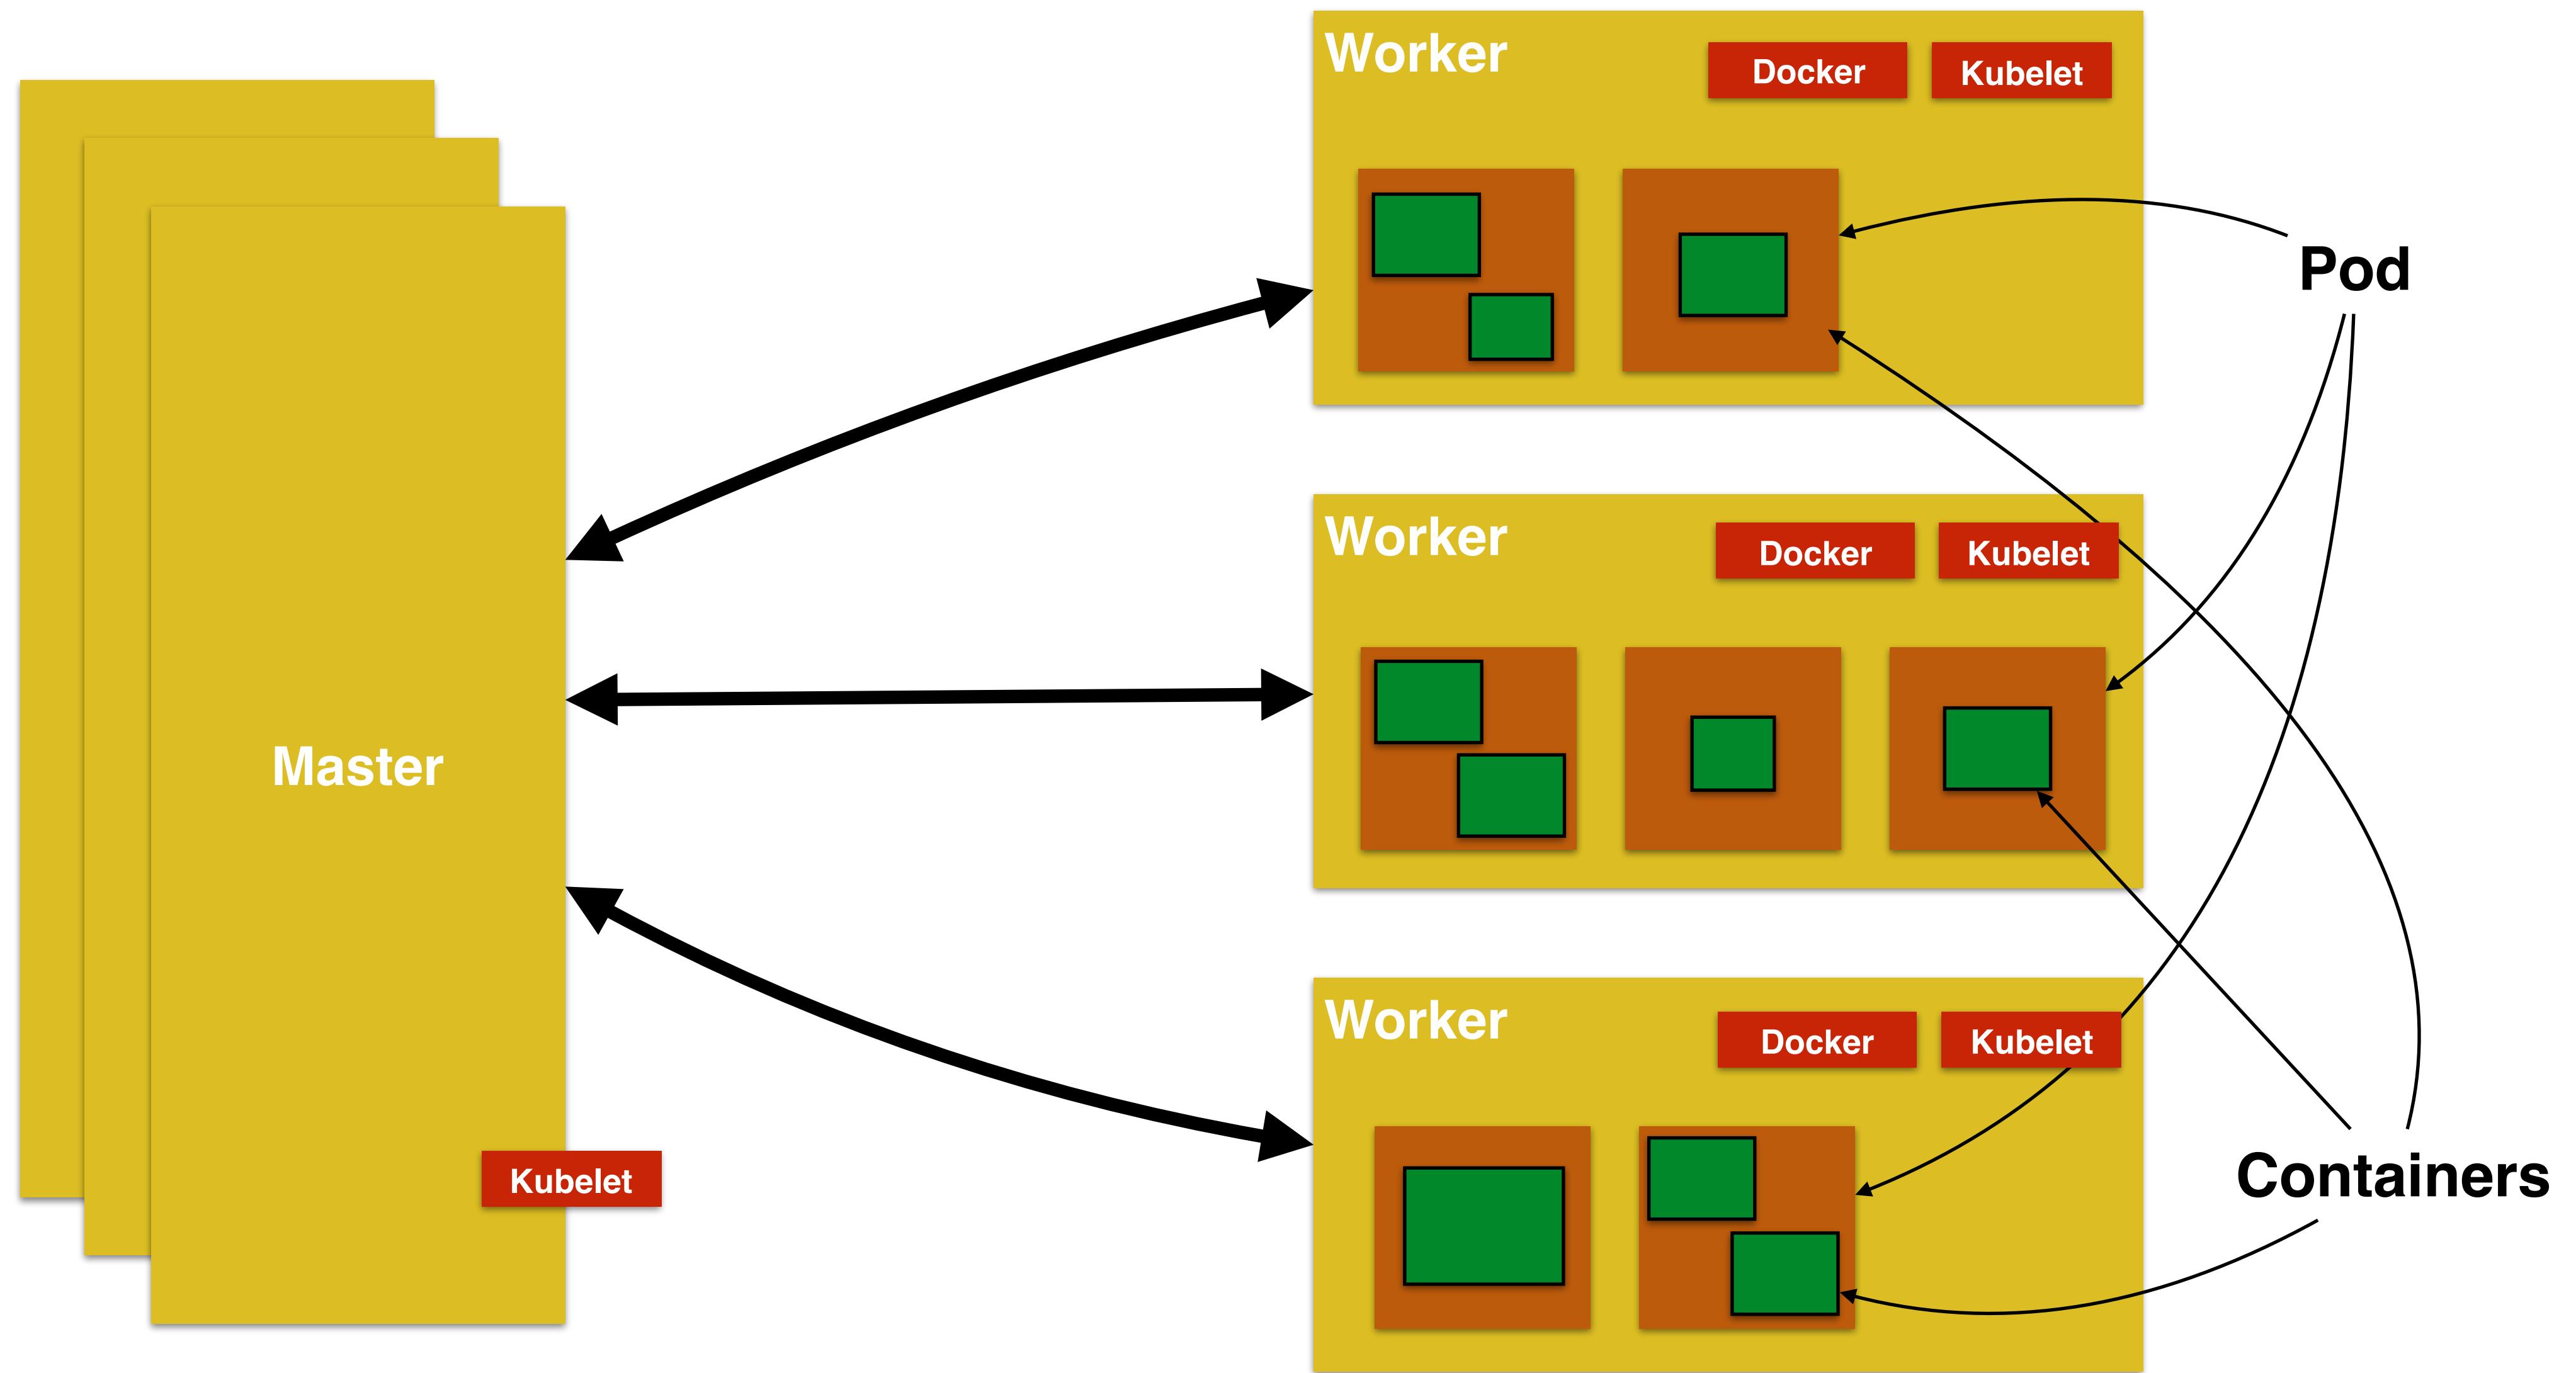

Components

- **Node**: Docker host running *kubelet* (node agent) and *proxy* services
 - Monitored by *systemd* (CentOS) or *monit* (Debian)
- **Master**: hosts cluster-level control services, including the API server, scheduler, and controller manager
- **etcd**: distributed key-value store used to persist Kubernetes system state

Architecture

Master High Availability

- Hack by running a **podmaster** utility
- Proposal
 - Hot Standby
 - Warm Standby
 - Active-Active (Load Balanced)

kubectl

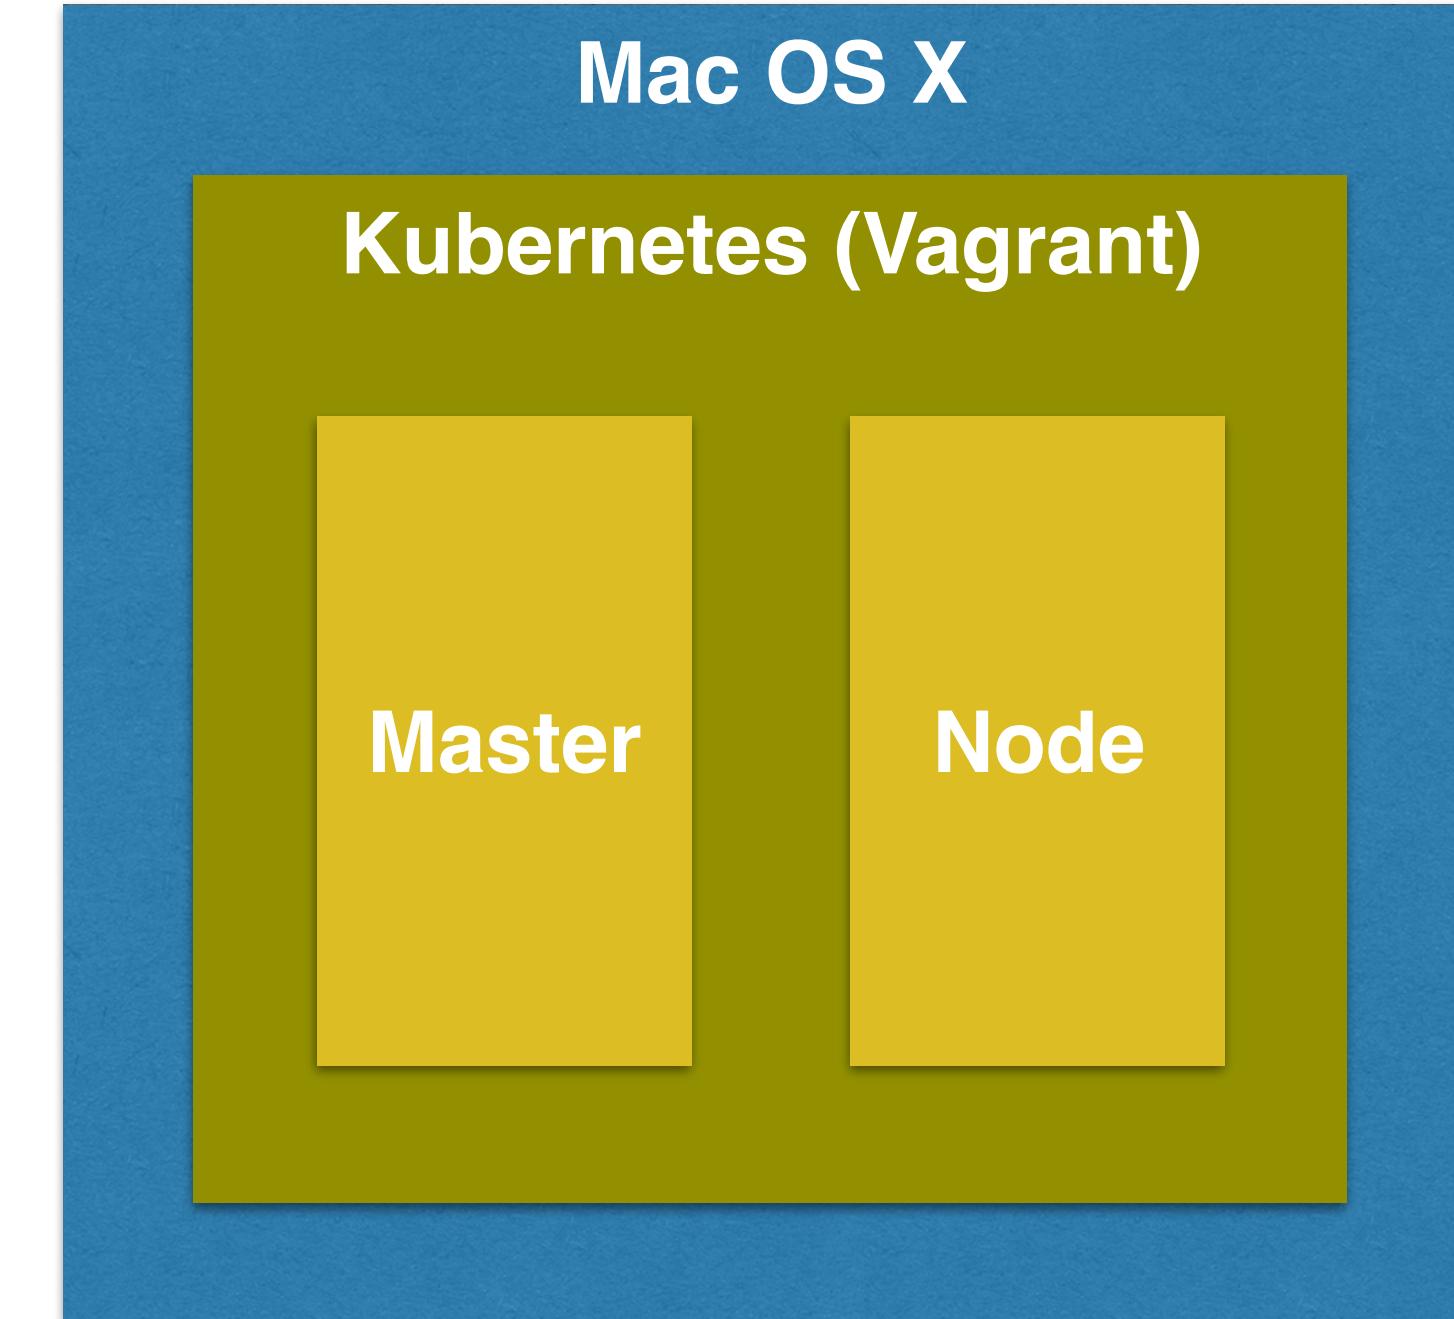

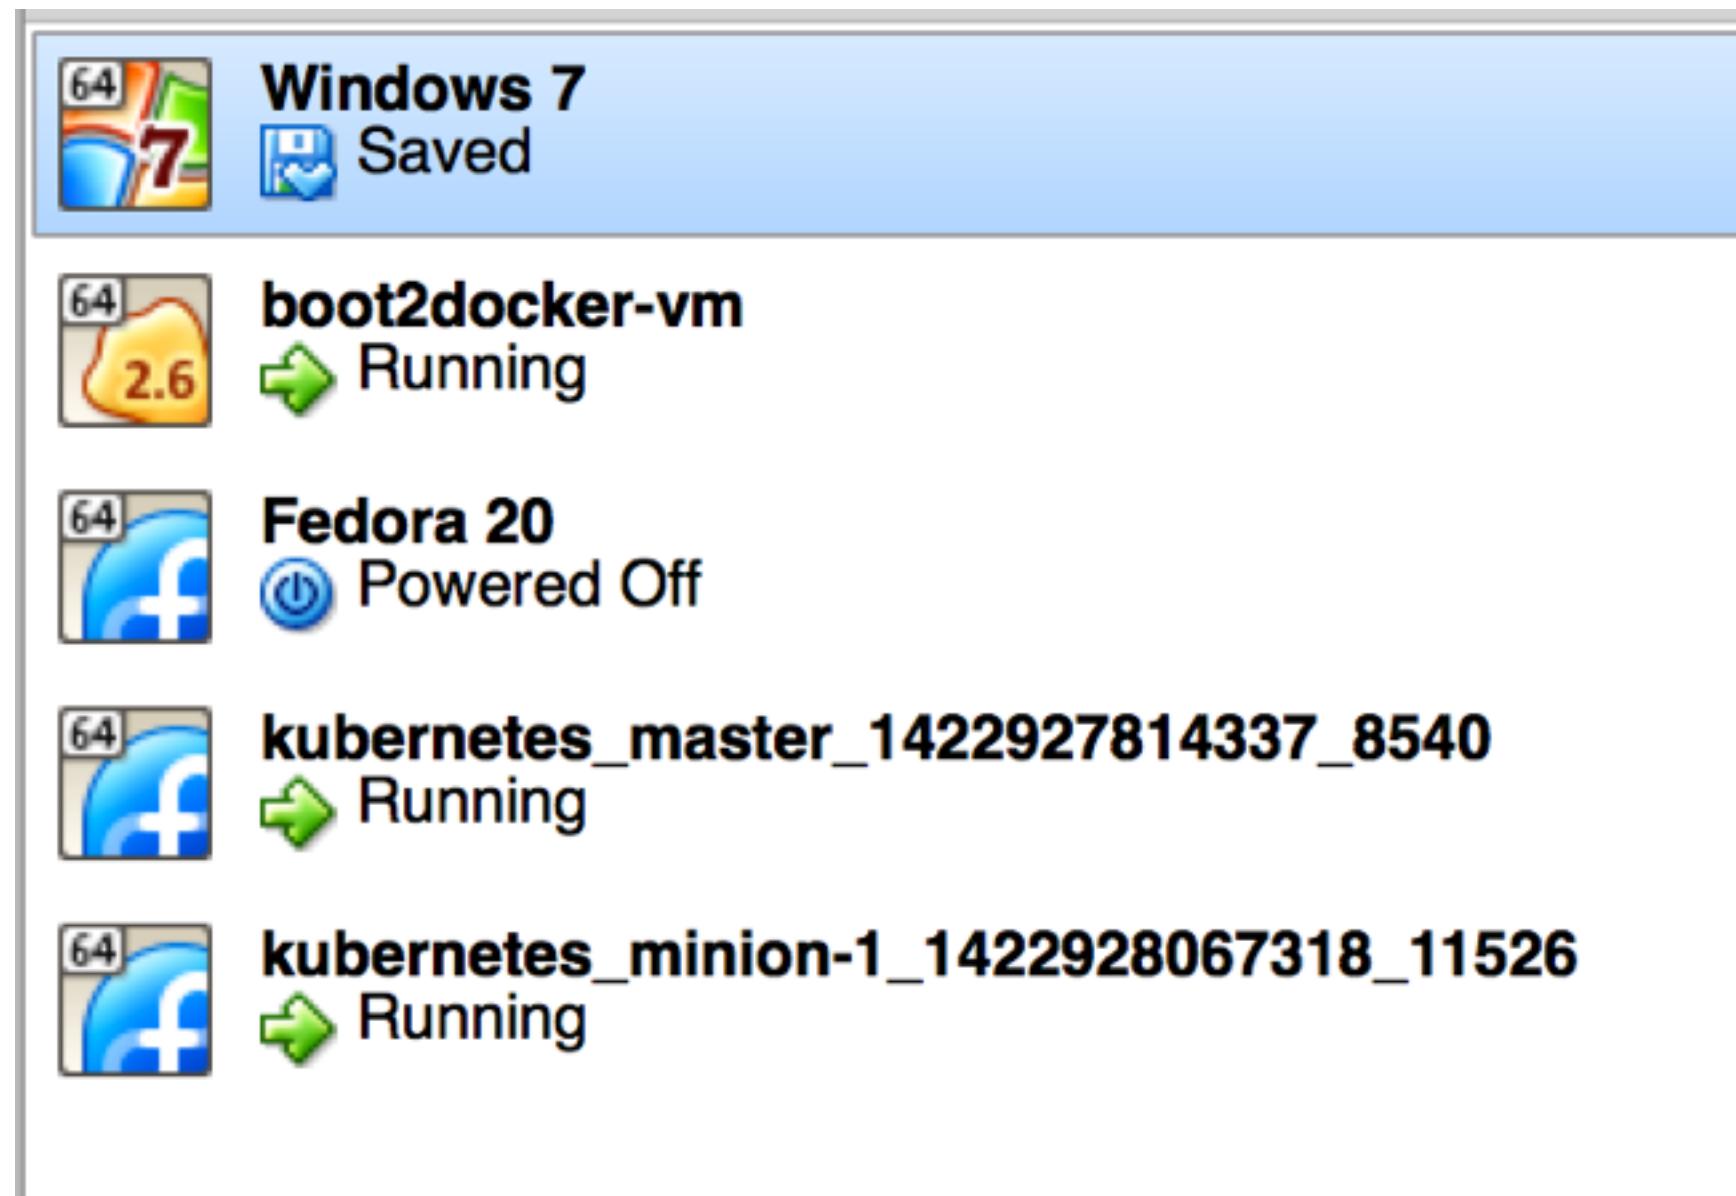

- Controls the Kubernetes cluster manager
- `kubectl get pods or minions`
- `kubectl create -f <filename>`
- `kubectl update or delete`
- `kubectl resize --replicas=3 replicationcontrollers <name>`

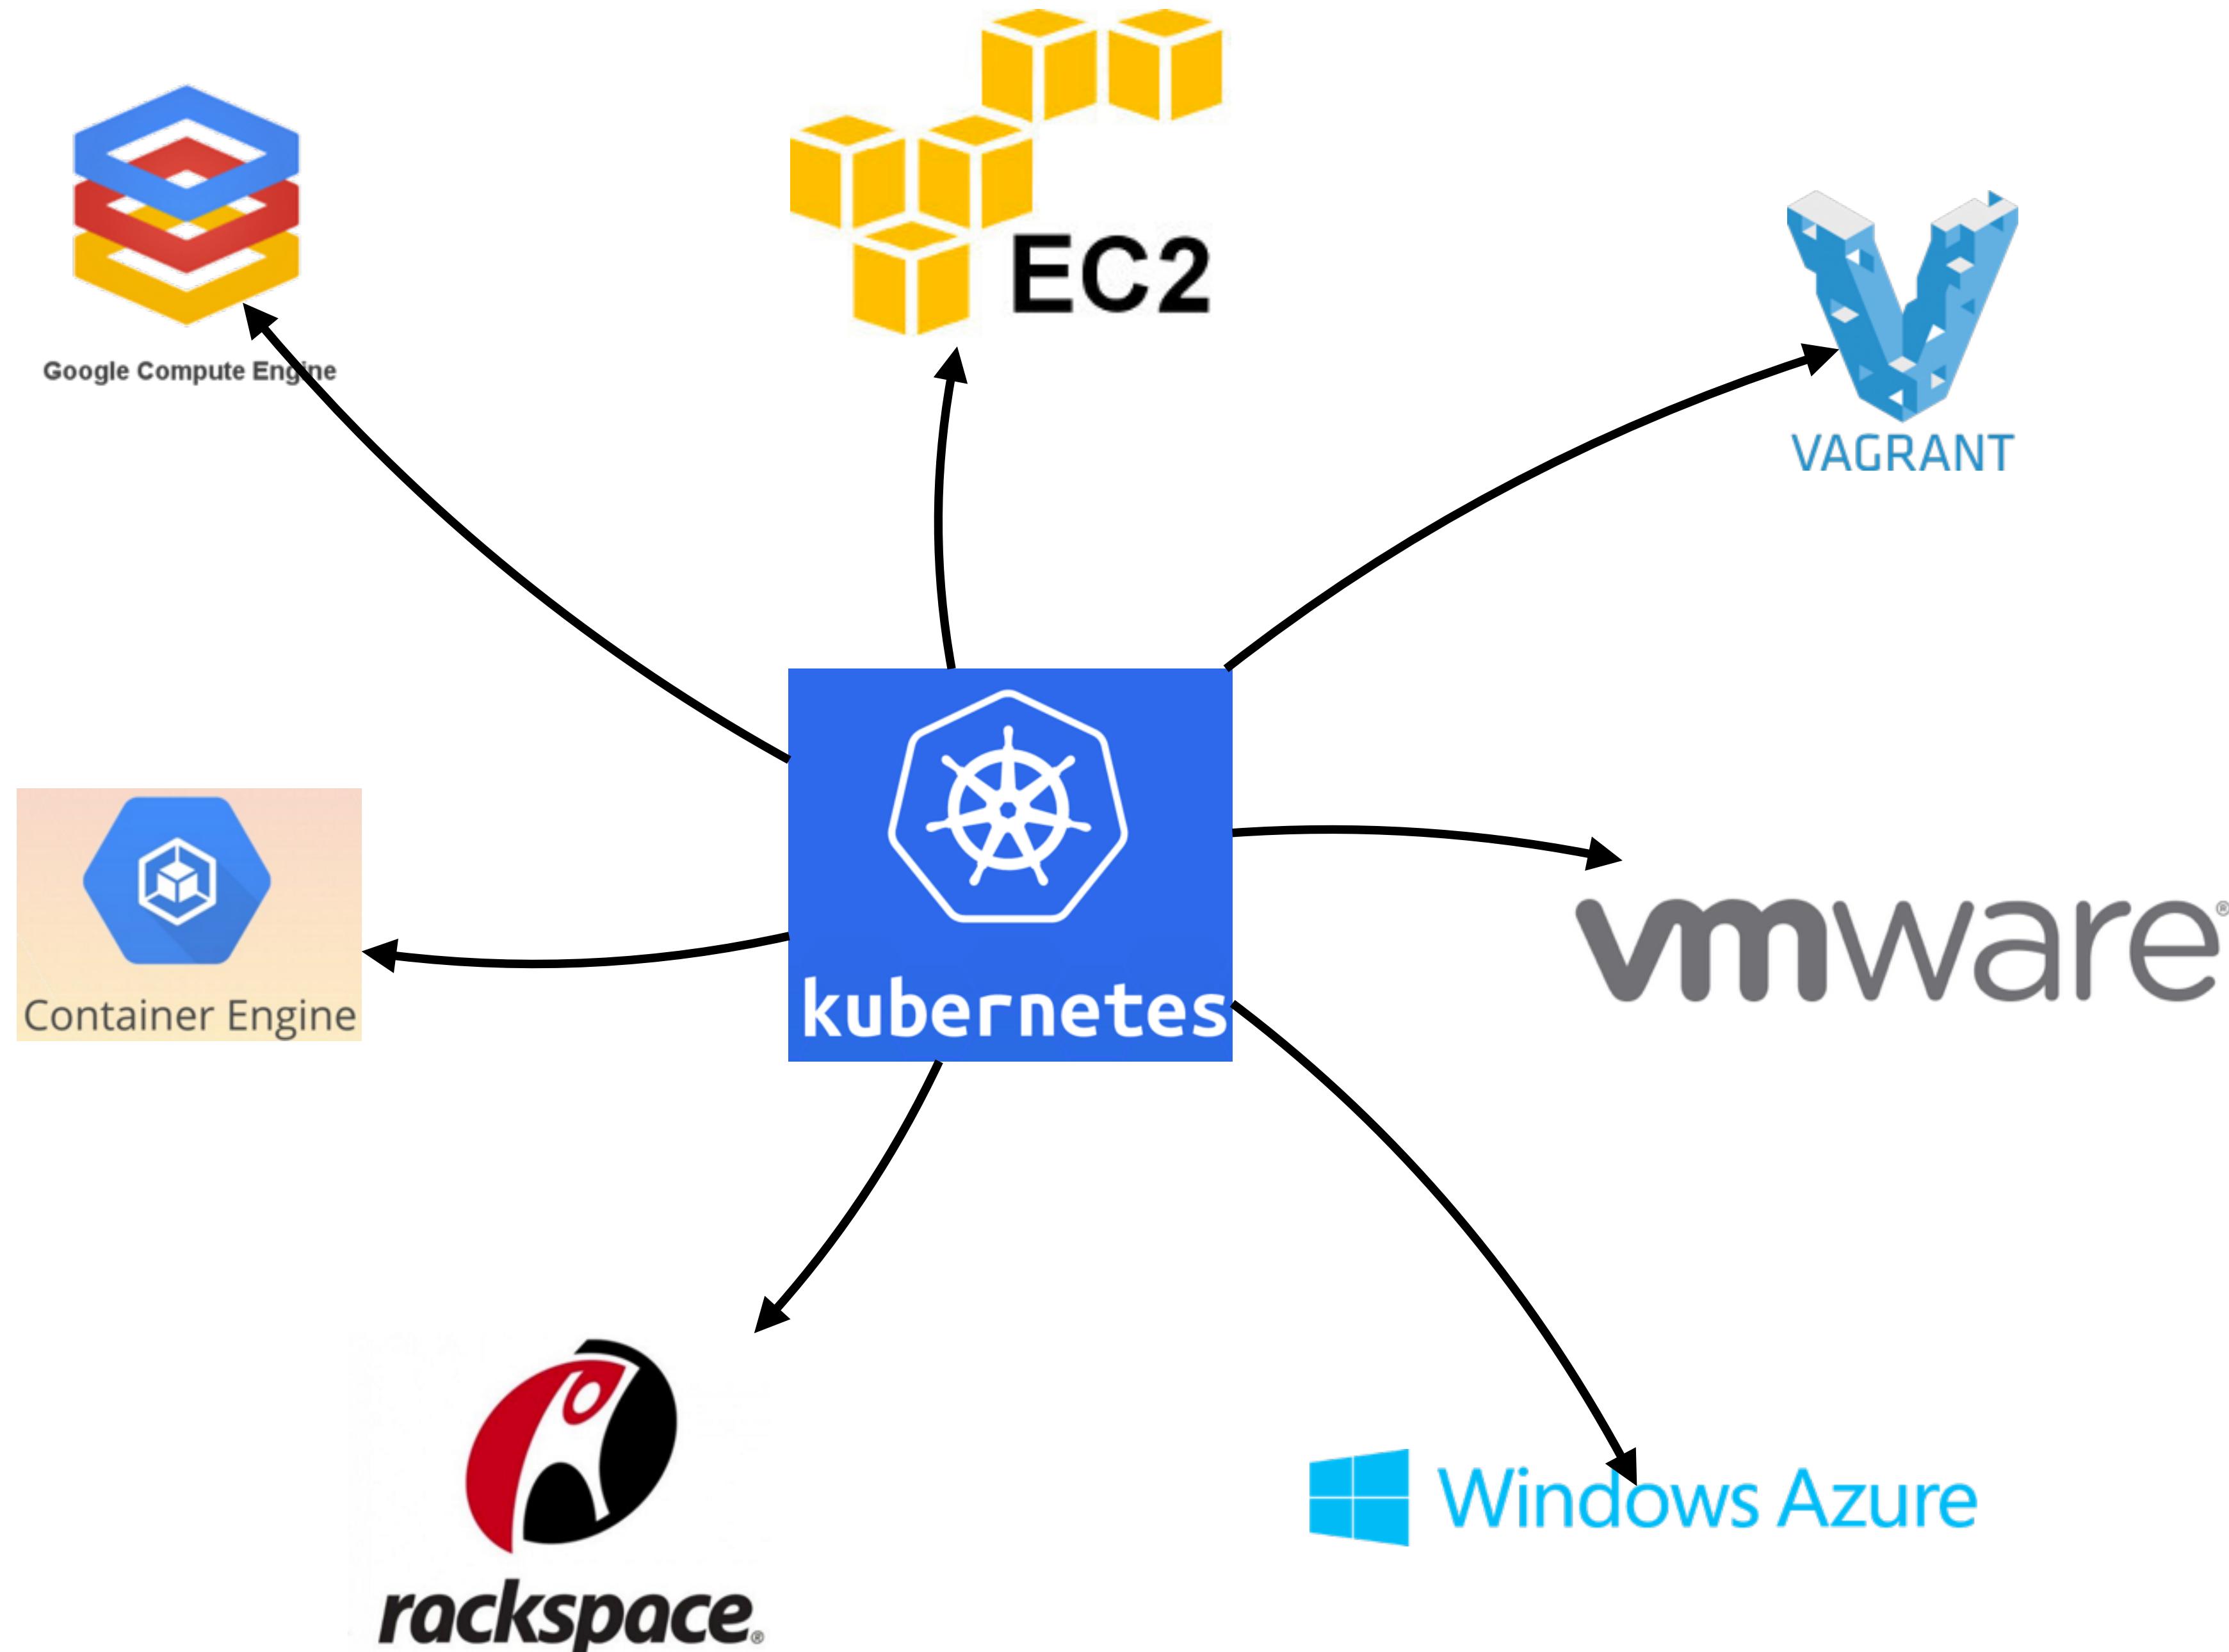

Kubernetes Config

```
1 apiVersion: v1
2 kind: Pod
3 metadata:
4   name: wildfly-pod
5   labels:
6     name: wildfly
7 spec:
8   containers:
9     - image: jboss/wildfly
10    name: wildfly-pod
11    ports:
12      - containerPort: 8080
```

```
1 apiVersion: v1
2 kind: ReplicationController
3 metadata:
4   name: wildfly-rc
5   labels:
6     name: wildfly
7 spec:
8   replicas: 2
9   template:
10  metadata:
11  labels:
12  name: wildfly
13 spec:
14   containers:
15     - name: wildfly-rc-pod
16       image: jboss/wildfly
17     ports:
18       - containerPort: 8080
```

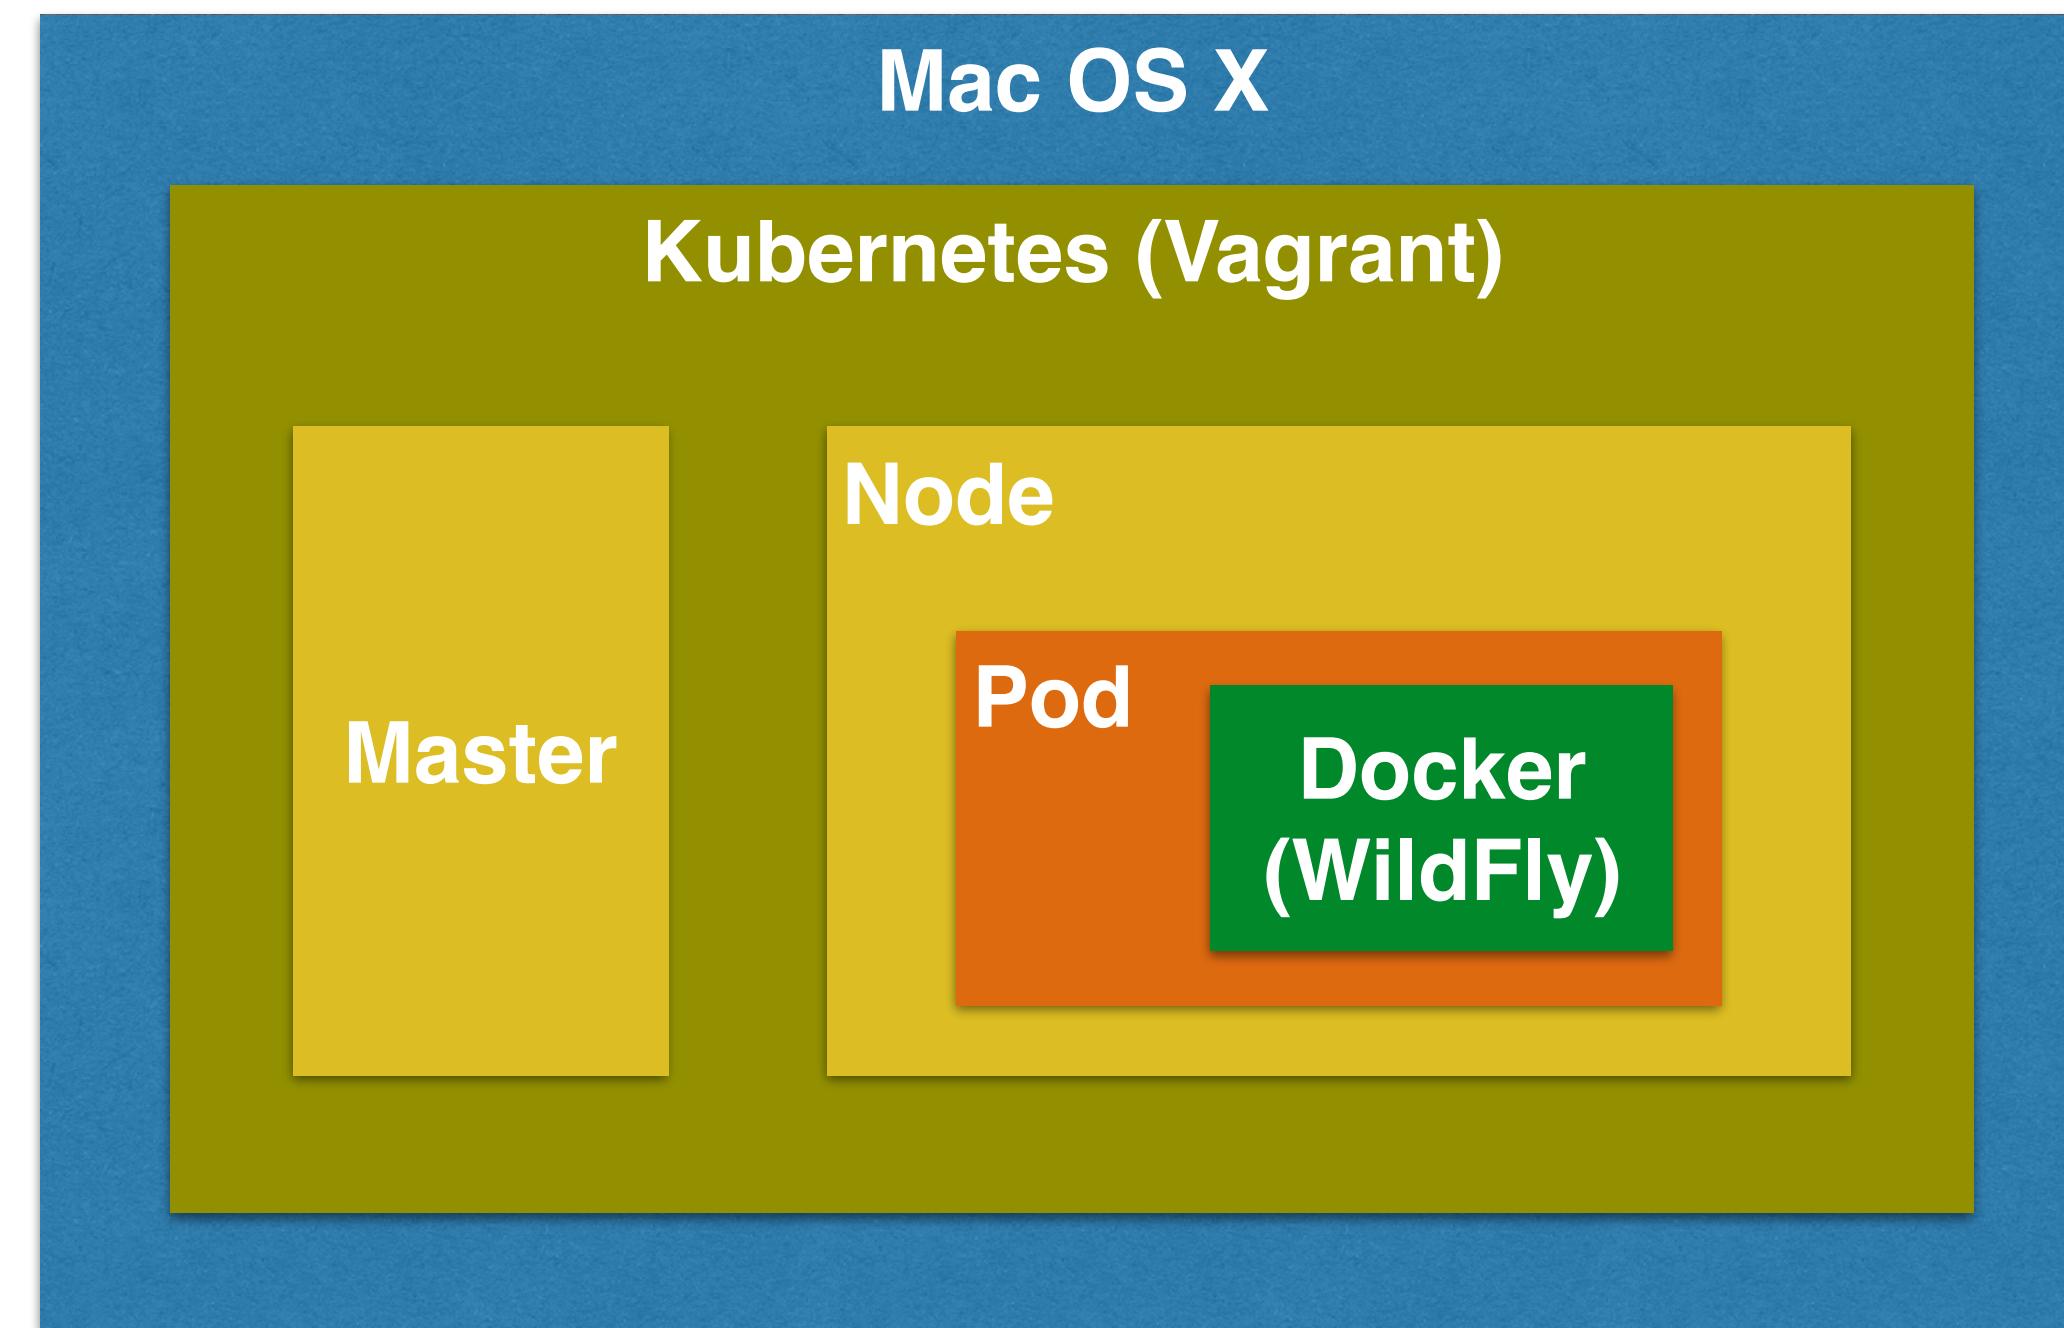

```
export KUBERNETES_PROVIDER=vagrant  
./cluster/kube-up.sh
```

A Pod with One Container

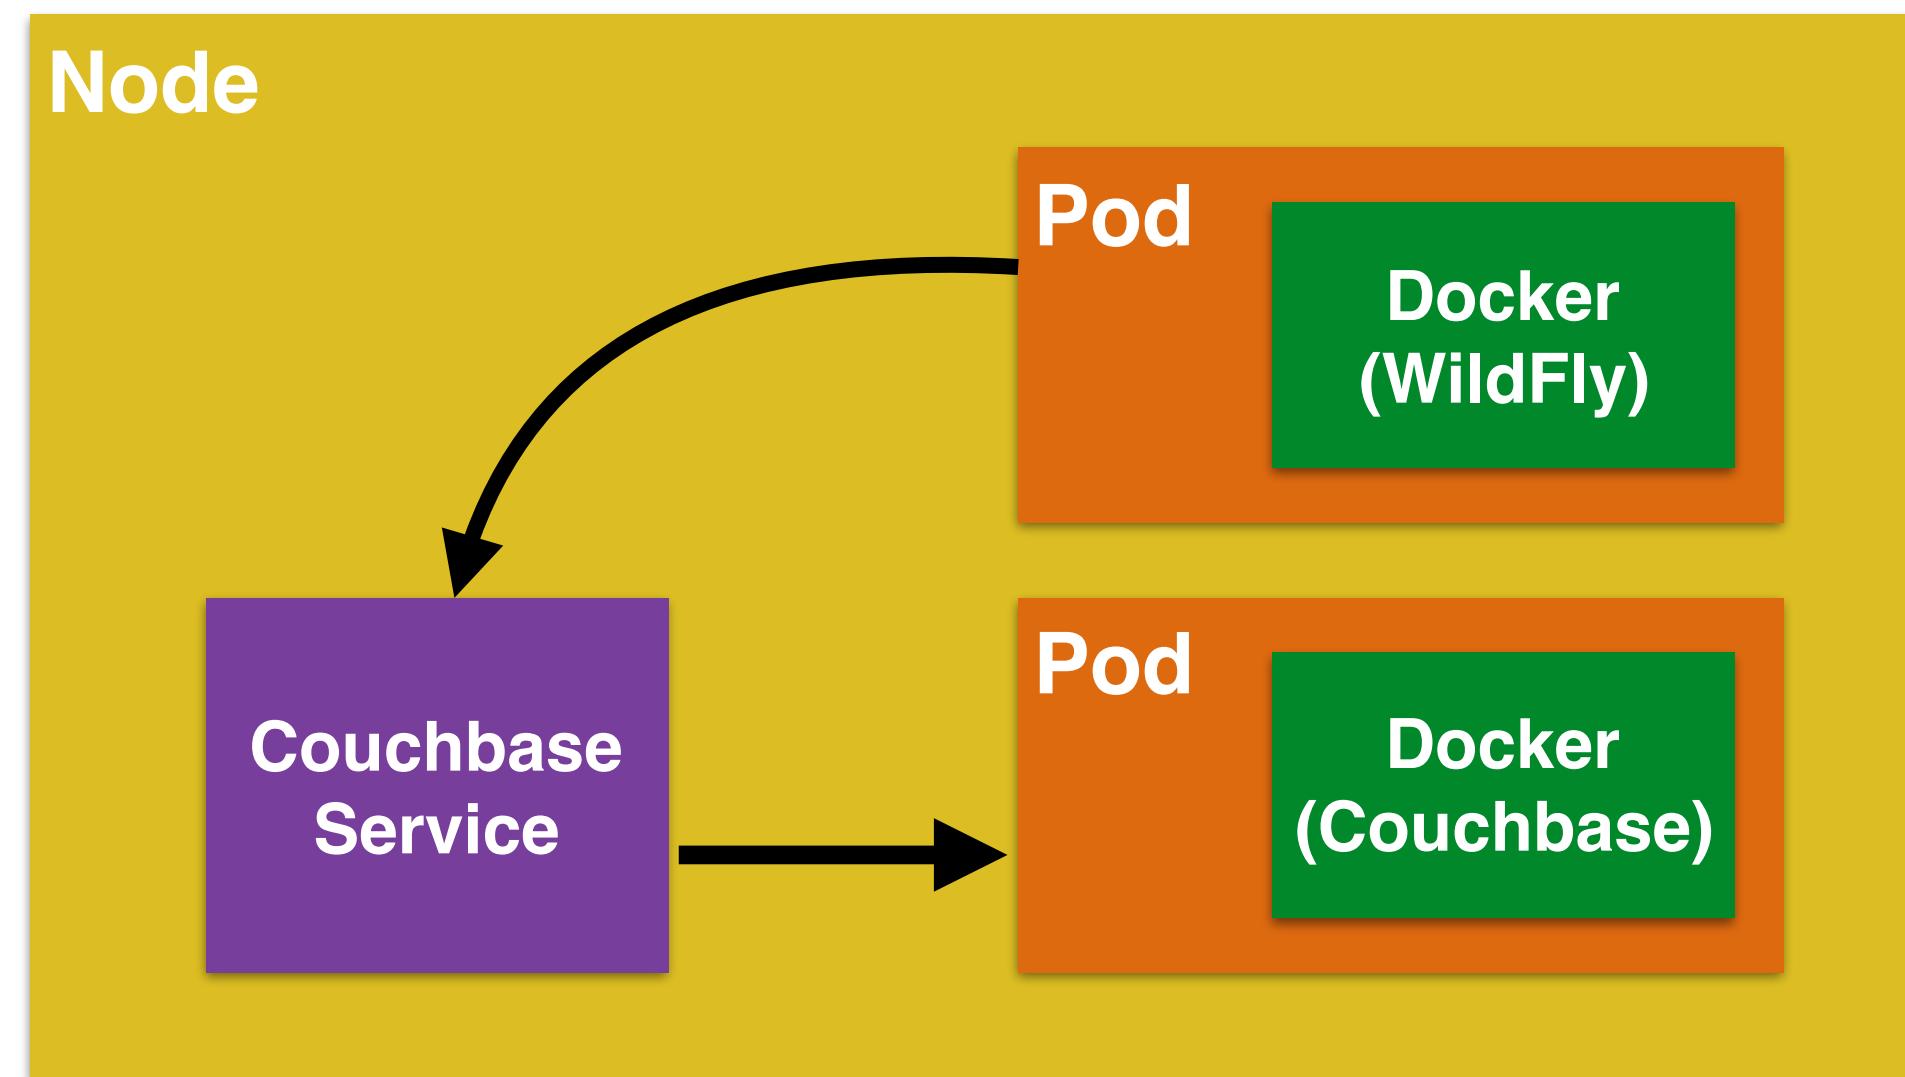

```
1 apiVersion: v1
2 kind: Pod
3 metadata:
4   name: wildfly-pod
5   labels:
6     name: wildfly
7 spec:
8   containers:
9     - image: jboss/wildfly
10    name: wildfly-pod
11    ports:
12      - containerPort: 8080
```

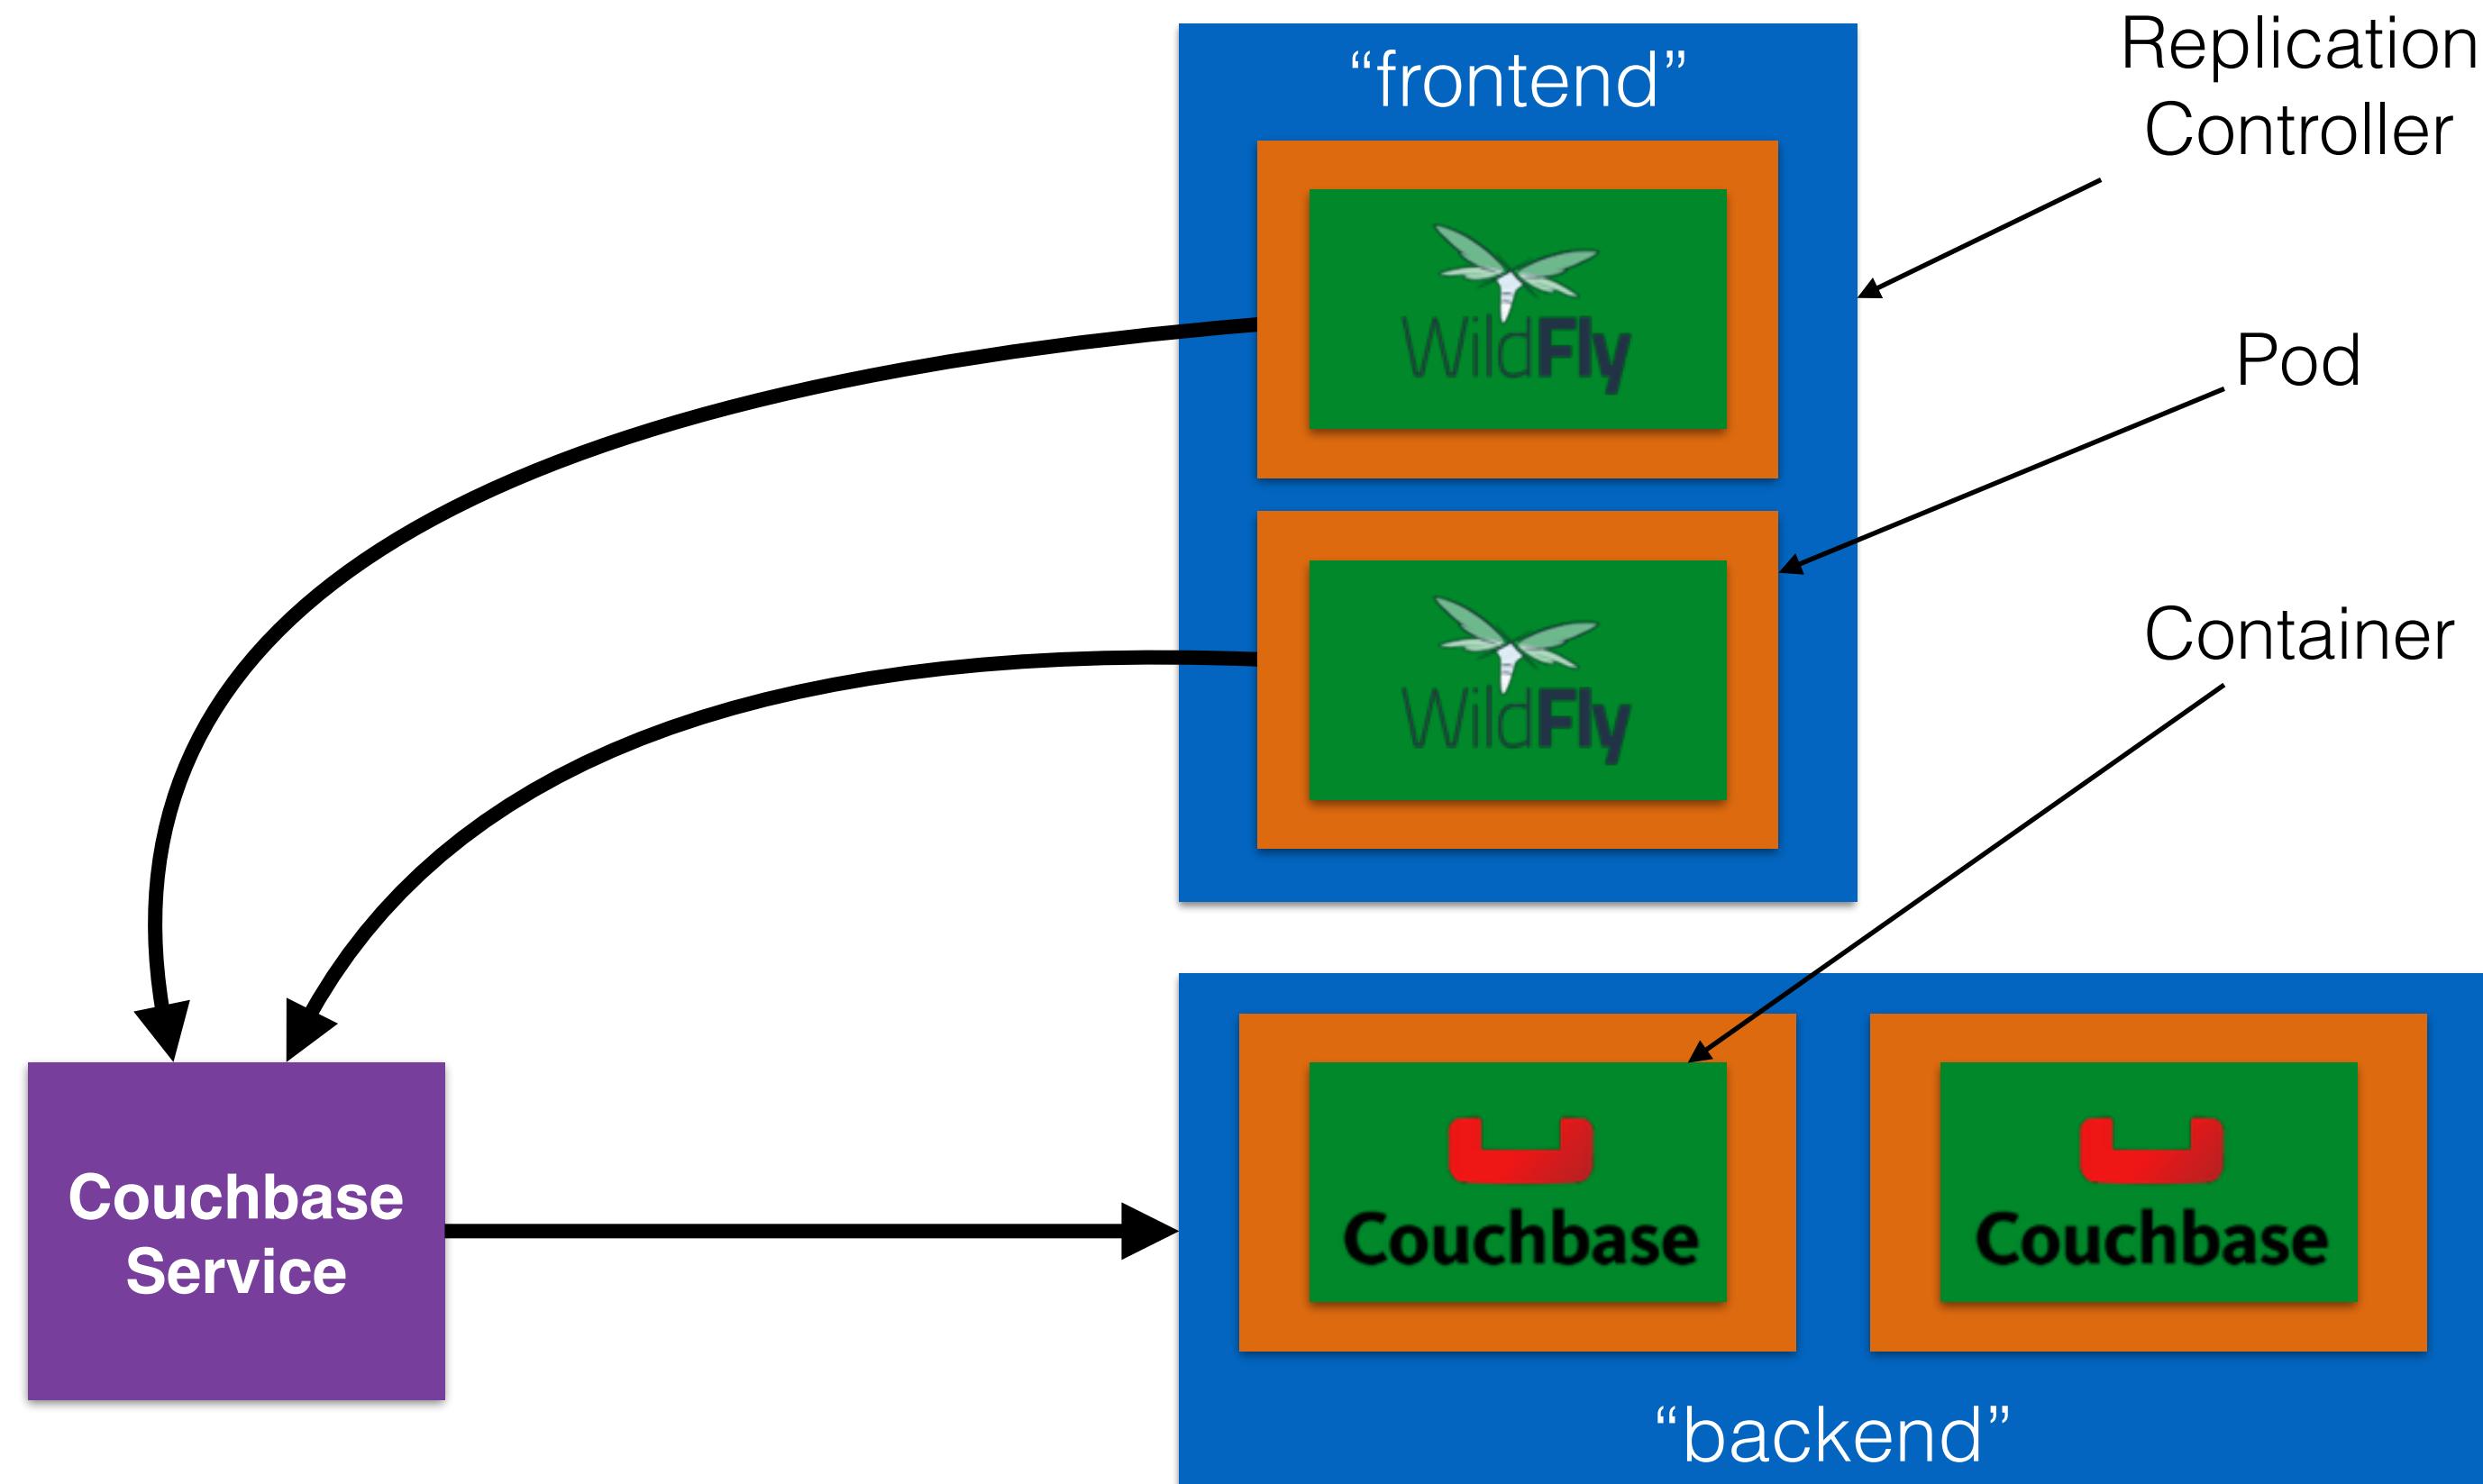

Services

- Abstract a set of pods as a single IP and port
 - Simple TCP/UDP load balancing
- Creates environment variables in other pods
- Stable endpoint for pods to reference
 - Allows list of pods to change dynamically

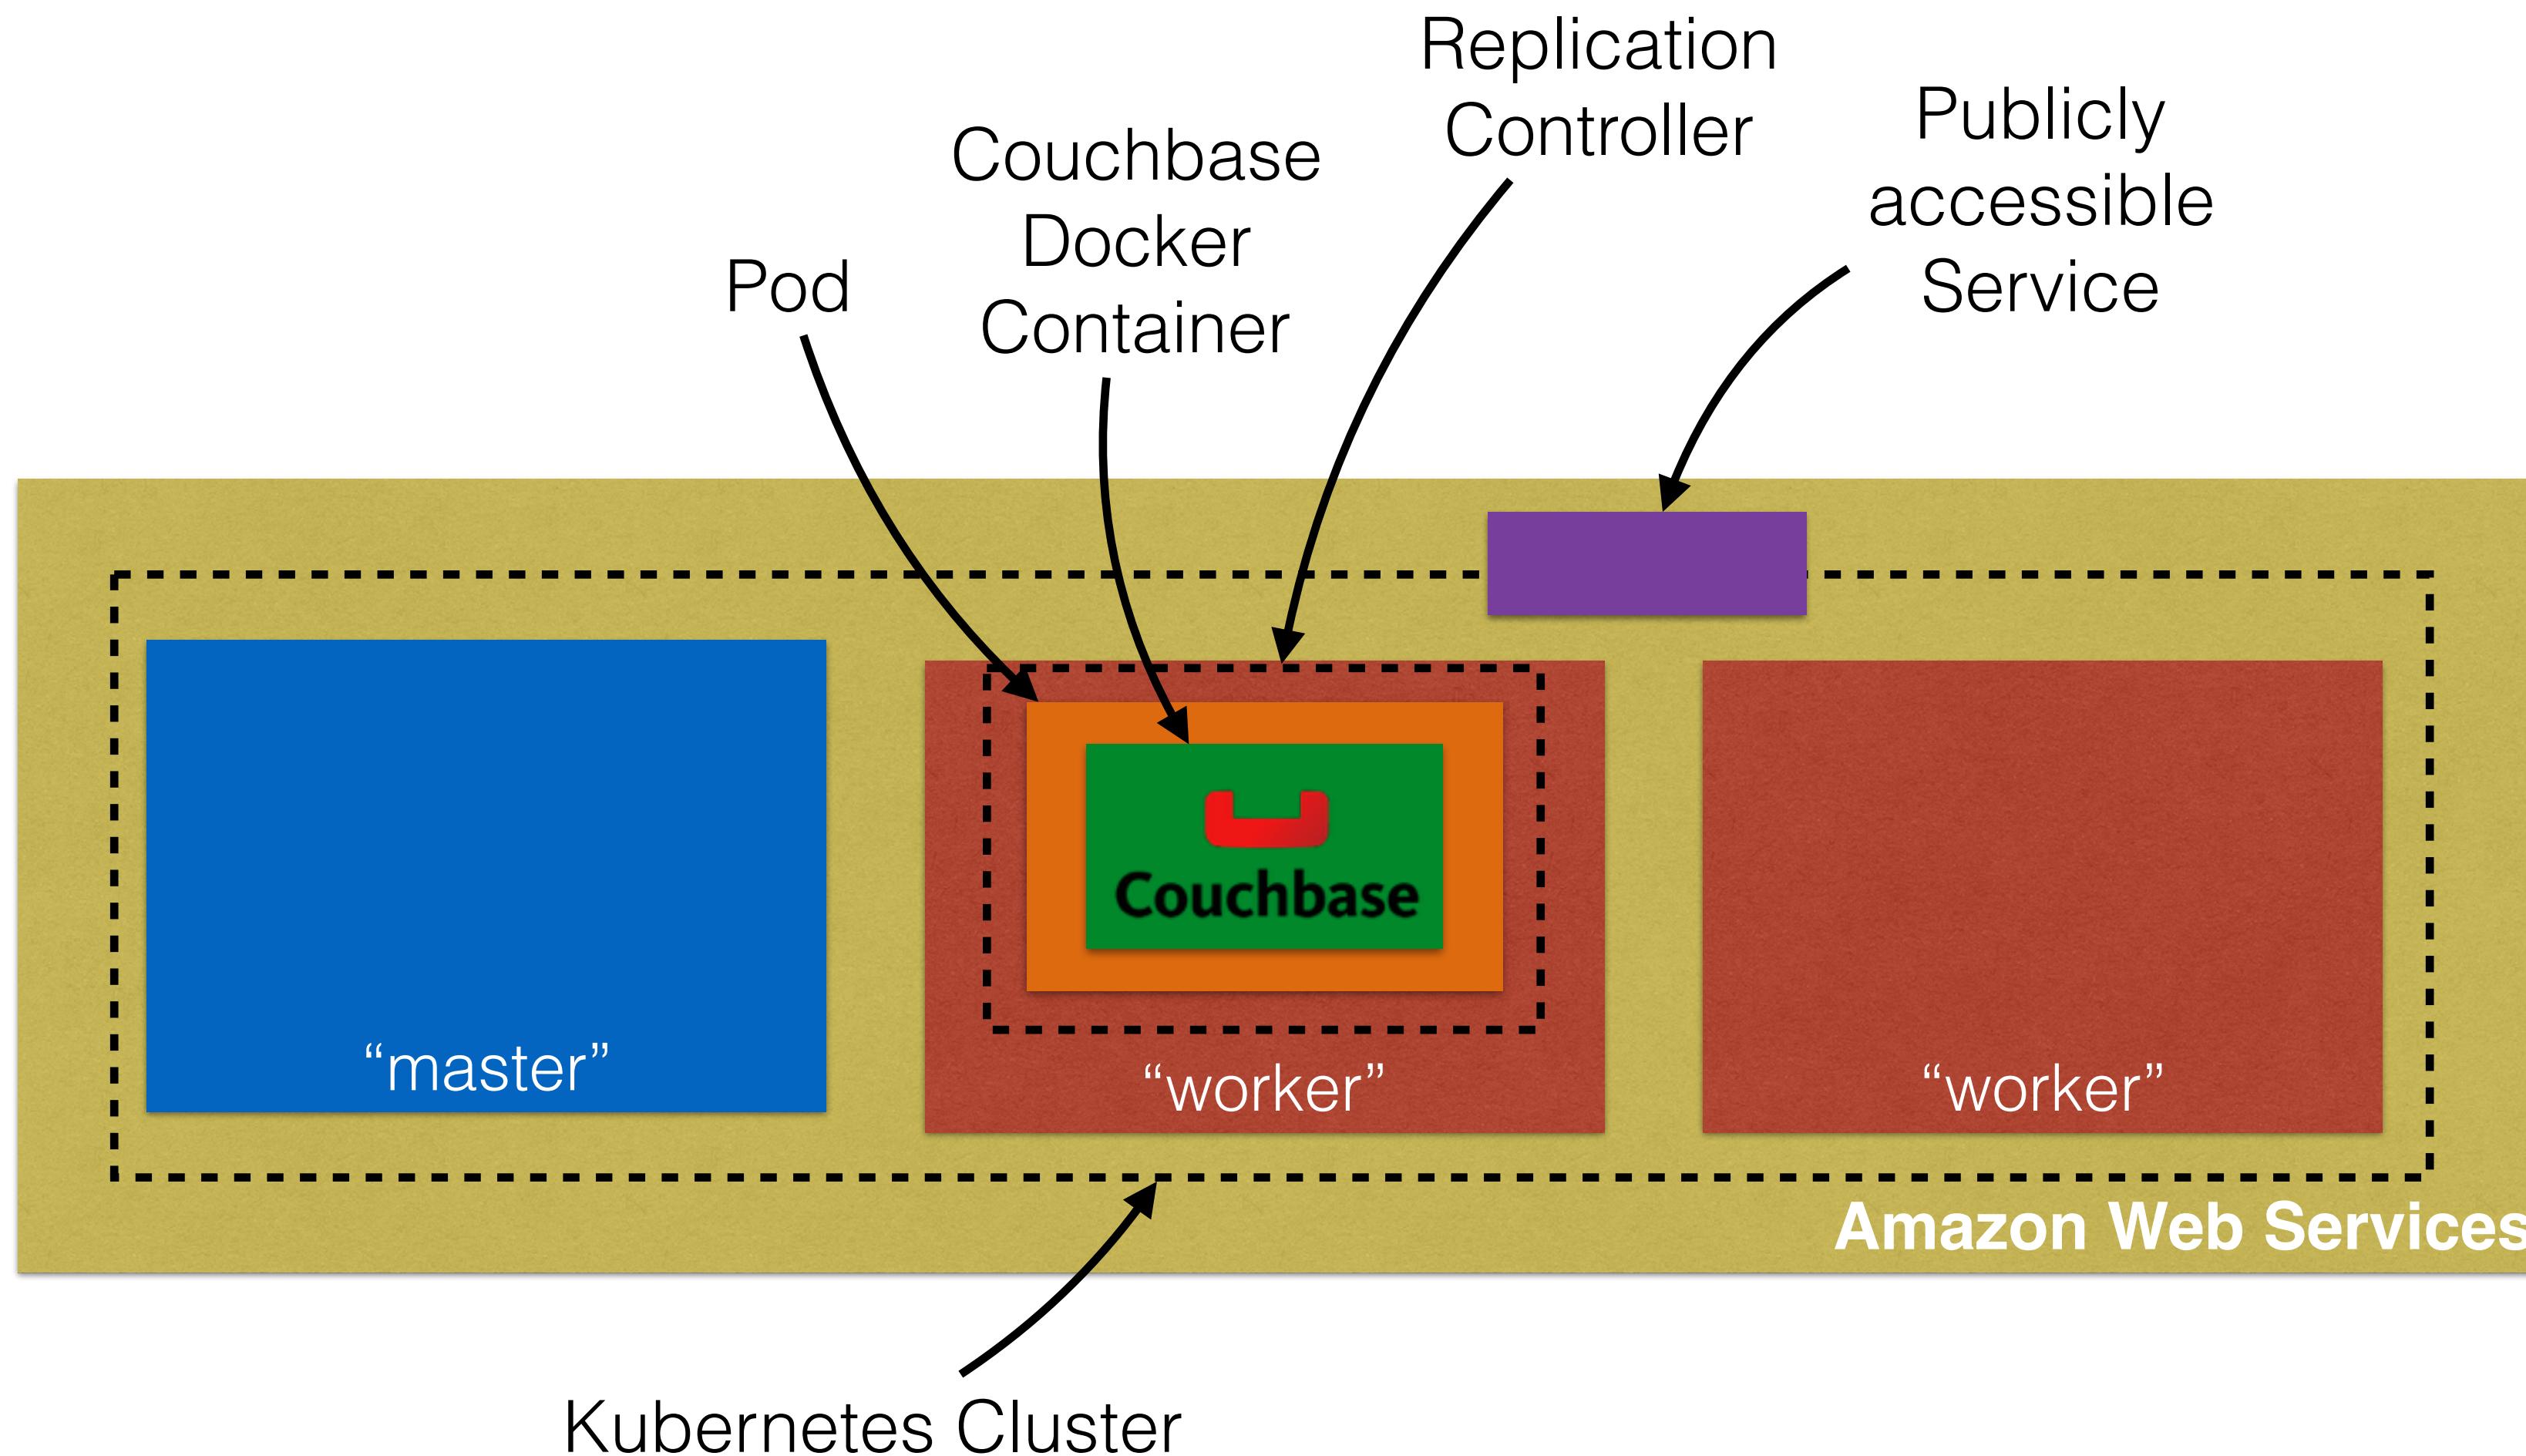

Services

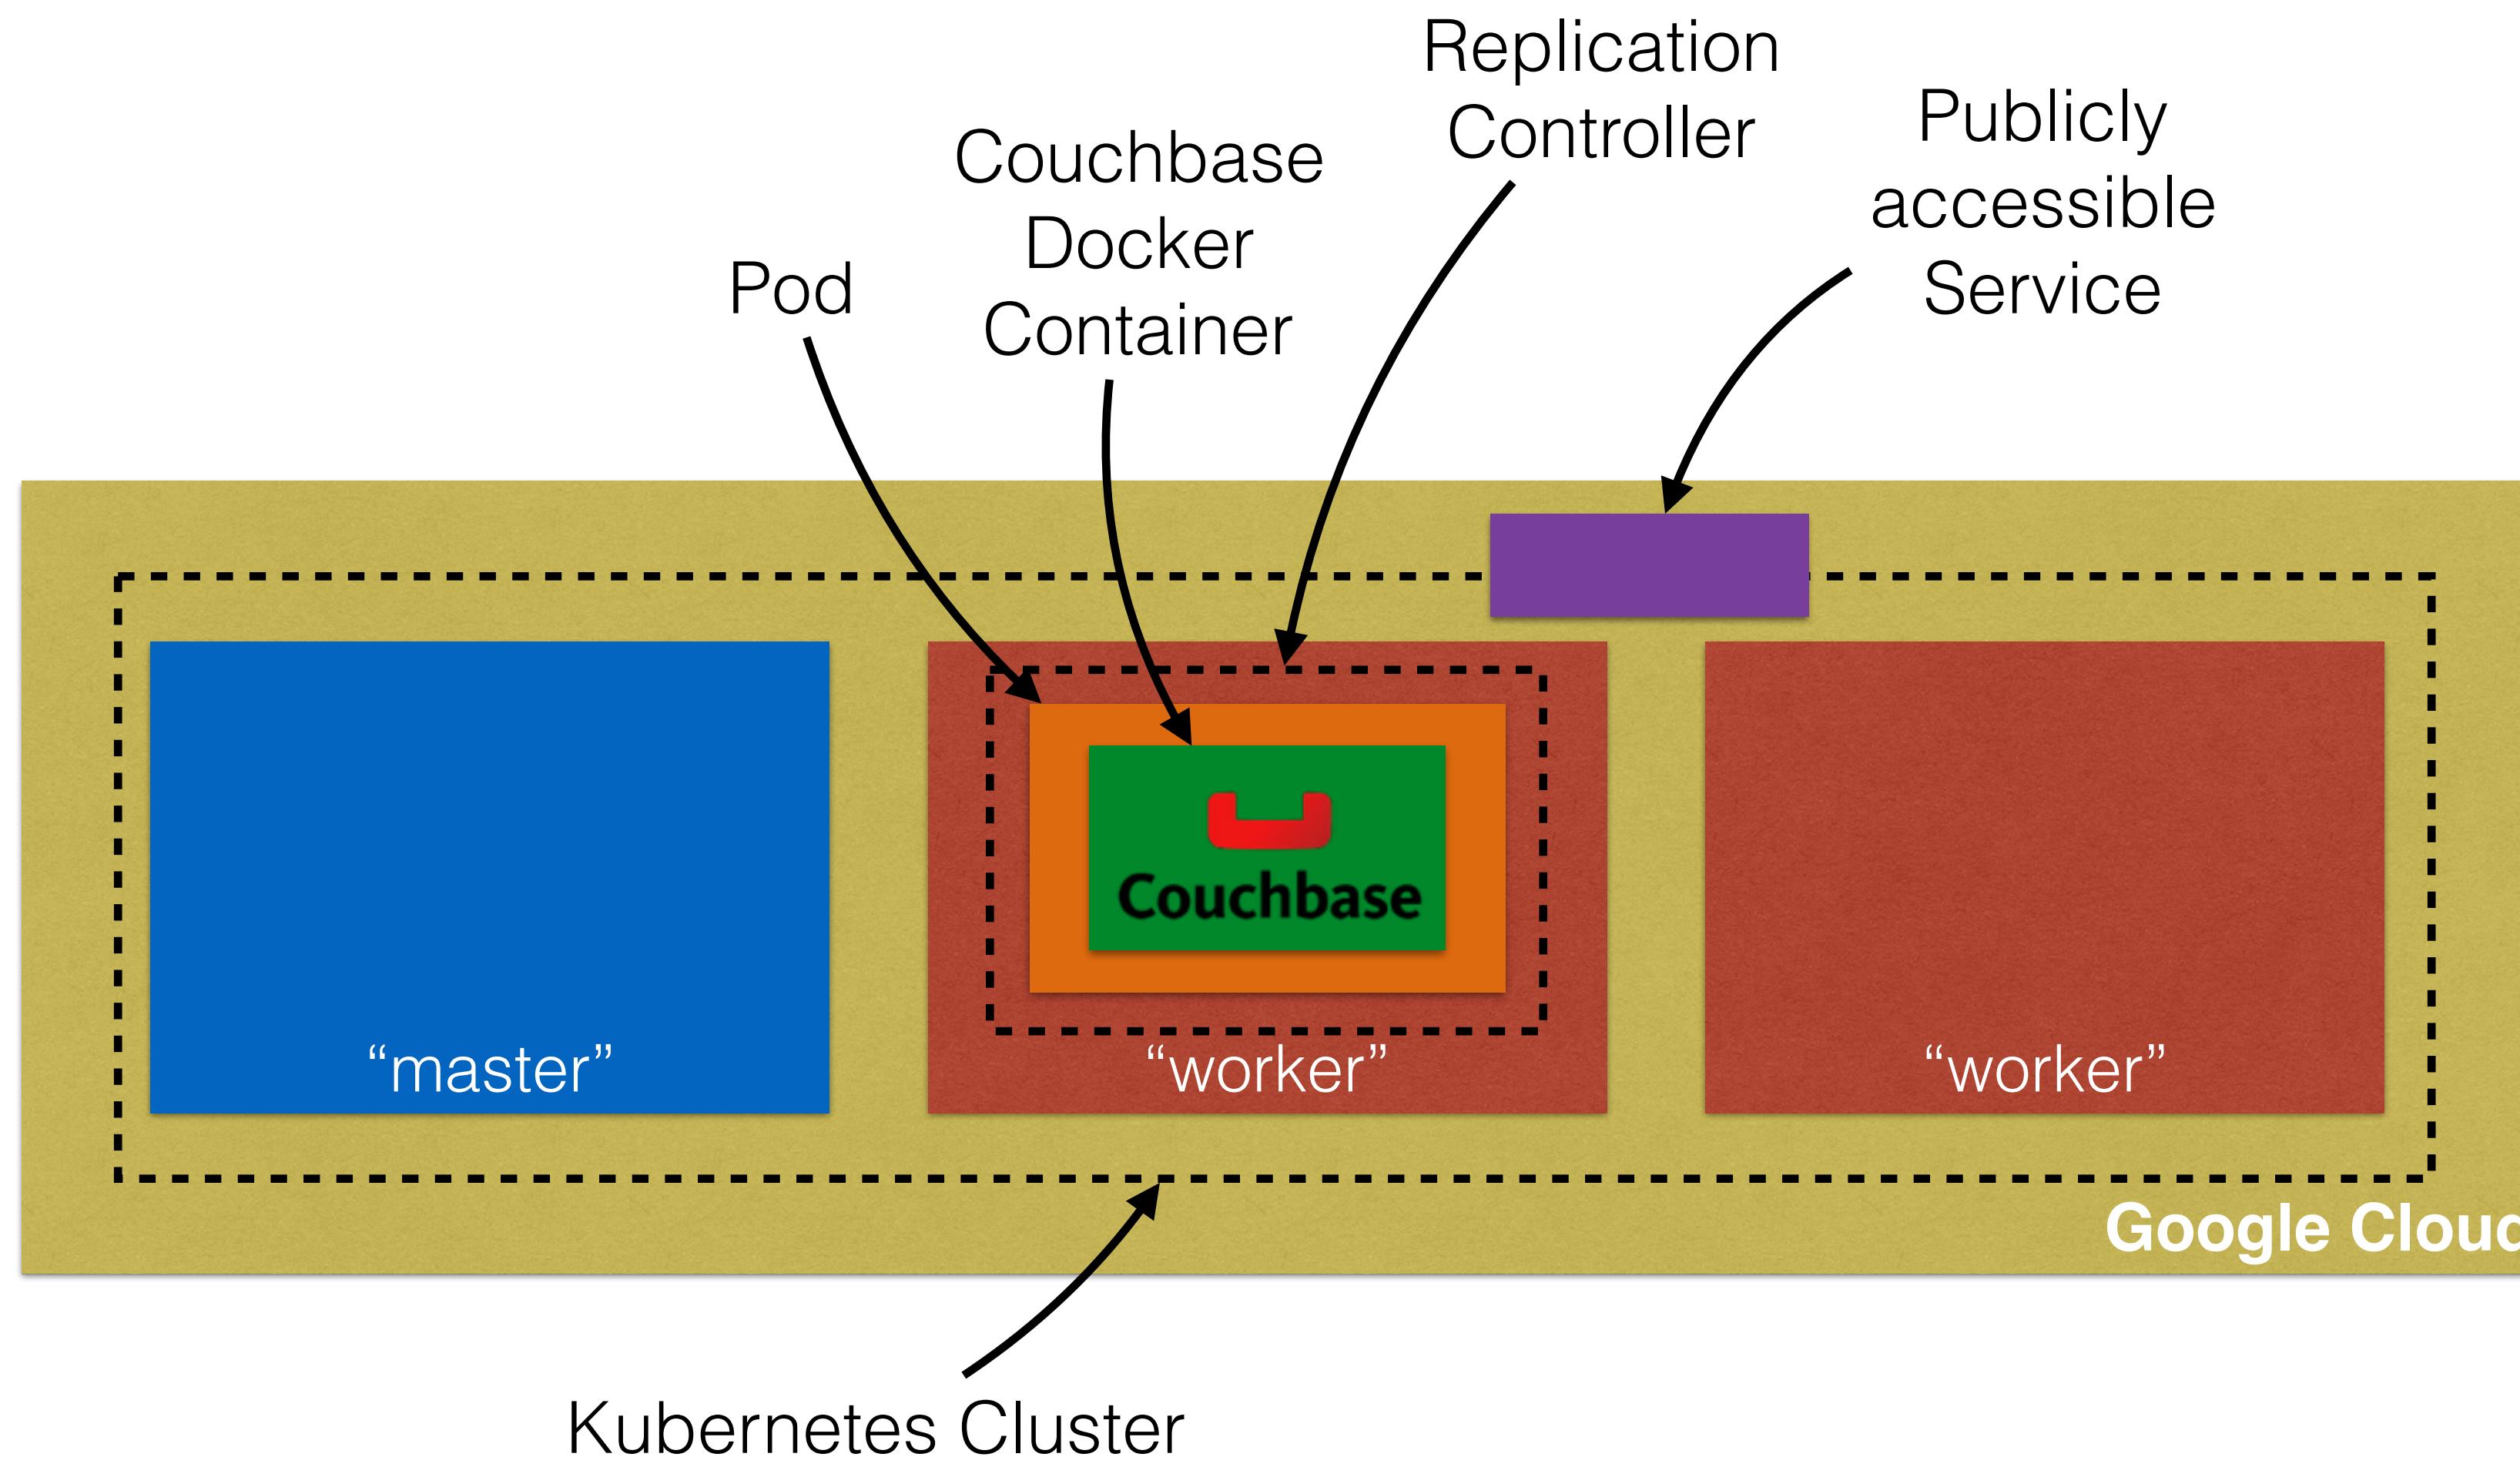

Services

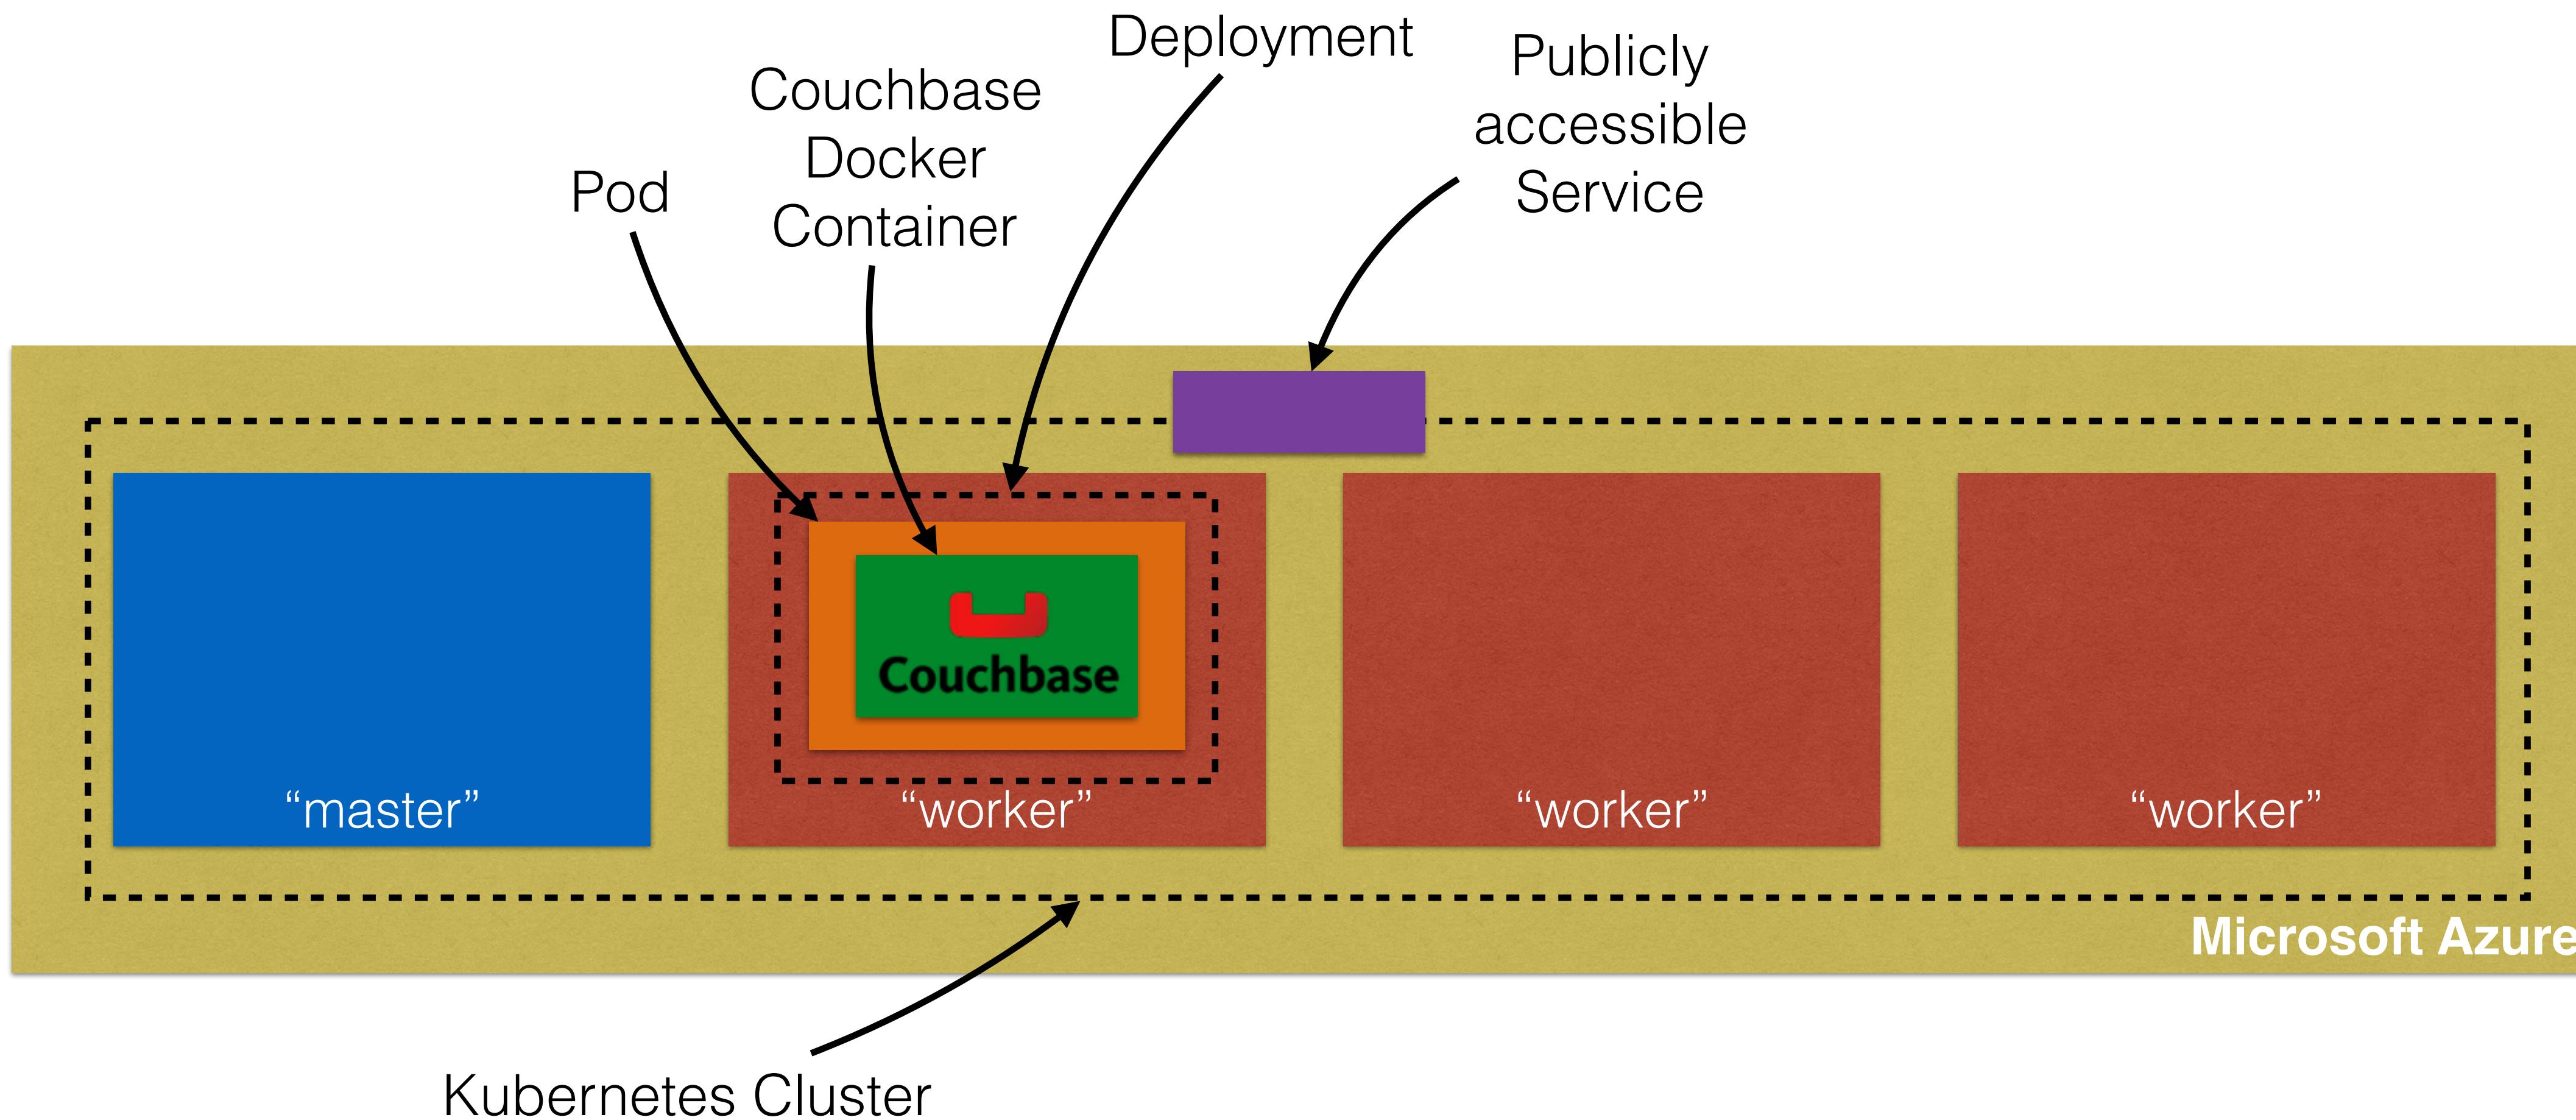

Services - AWS

Services - GCE

Services - Azure

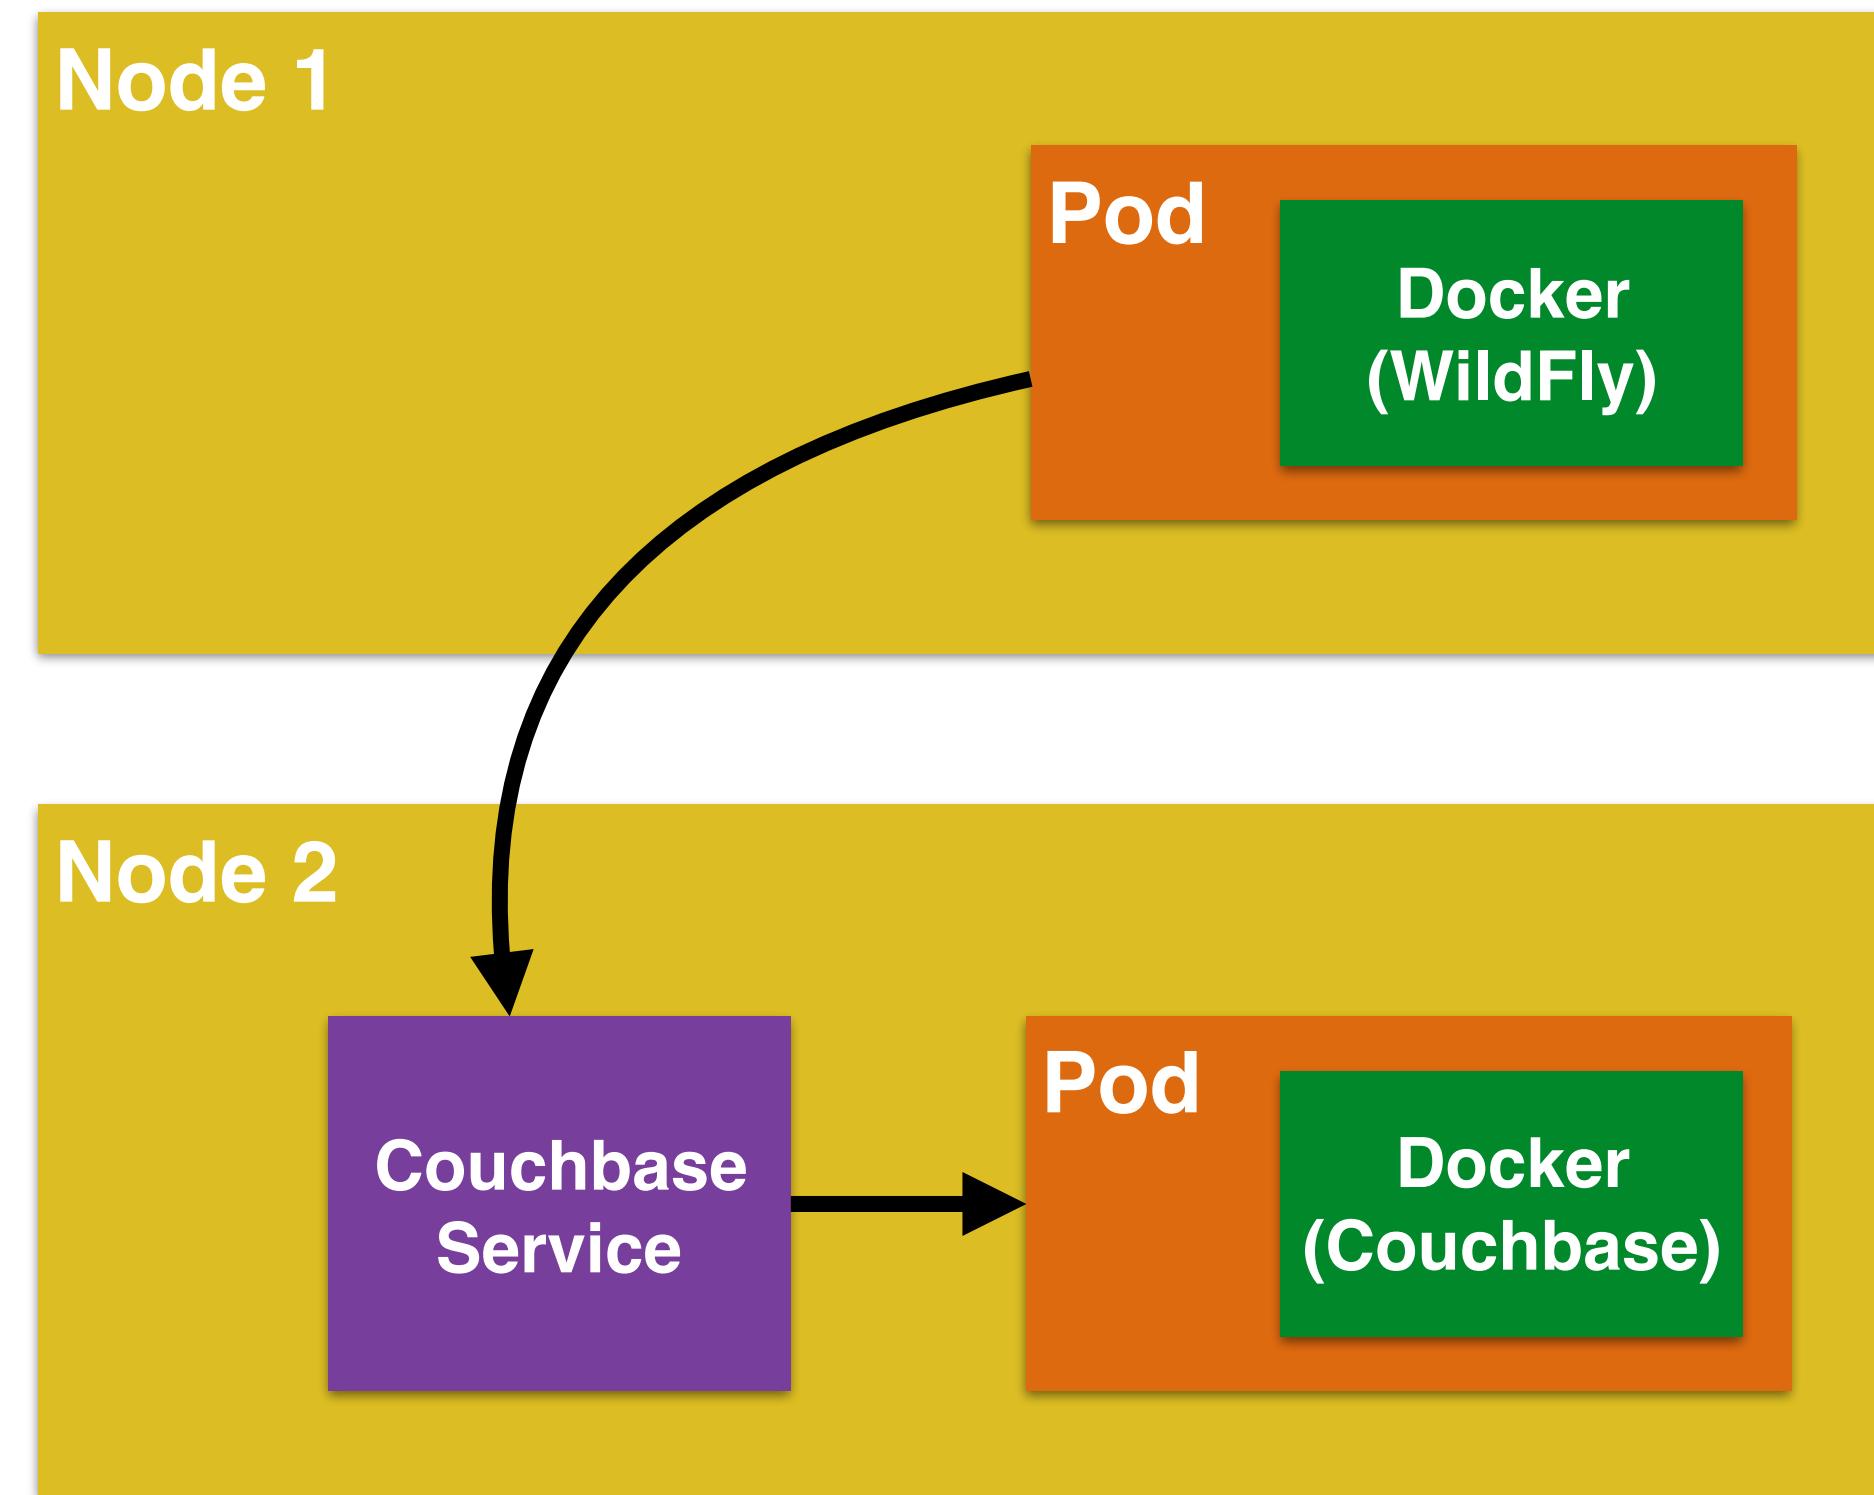

Services

```
1 apiVersion: v1
2 kind: ReplicationController
3 metadata:
4   name: couchbase-rc
5   labels:
6     name: couchbase-rc
7     context: docker-k8s-lab
8 spec:
9   replicas: 1
10  template:
11    metadata:
12      name: couchbase-rc-pod
13      labels:
14        name: couchbase-rc-pod
15        context: docker-k8s-lab
16    spec:
17      containers:
18        - name: couchbase-rc-pod
19          image: couchbase/server
20          volumeMounts:
21            - mountPath: "/opt/couchbase/var"
22              name: mypd
23          ports:
24            - containerPort: 8091
25              hostPort: 8091
26            - containerPort: 8092
27            - containerPort: 8093
28            - containerPort: 11210
```

```
1 apiVersion: v1
2 kind: Service
3 metadata:
4   name: couchbase-service
5   labels:
6     name: couchbase-service-pod
7     context: docker-k8s-lab
8 spec:
9   ports:
10    - port: 8091
11    - port: 8092
12    - port: 8093
13    - port: 11210
14  # label keys and values that must be present on pods
15  selection:
16    name: couchbase-rc-pod
17    context: docker-k8s-lab
```

Service across Two Nodes

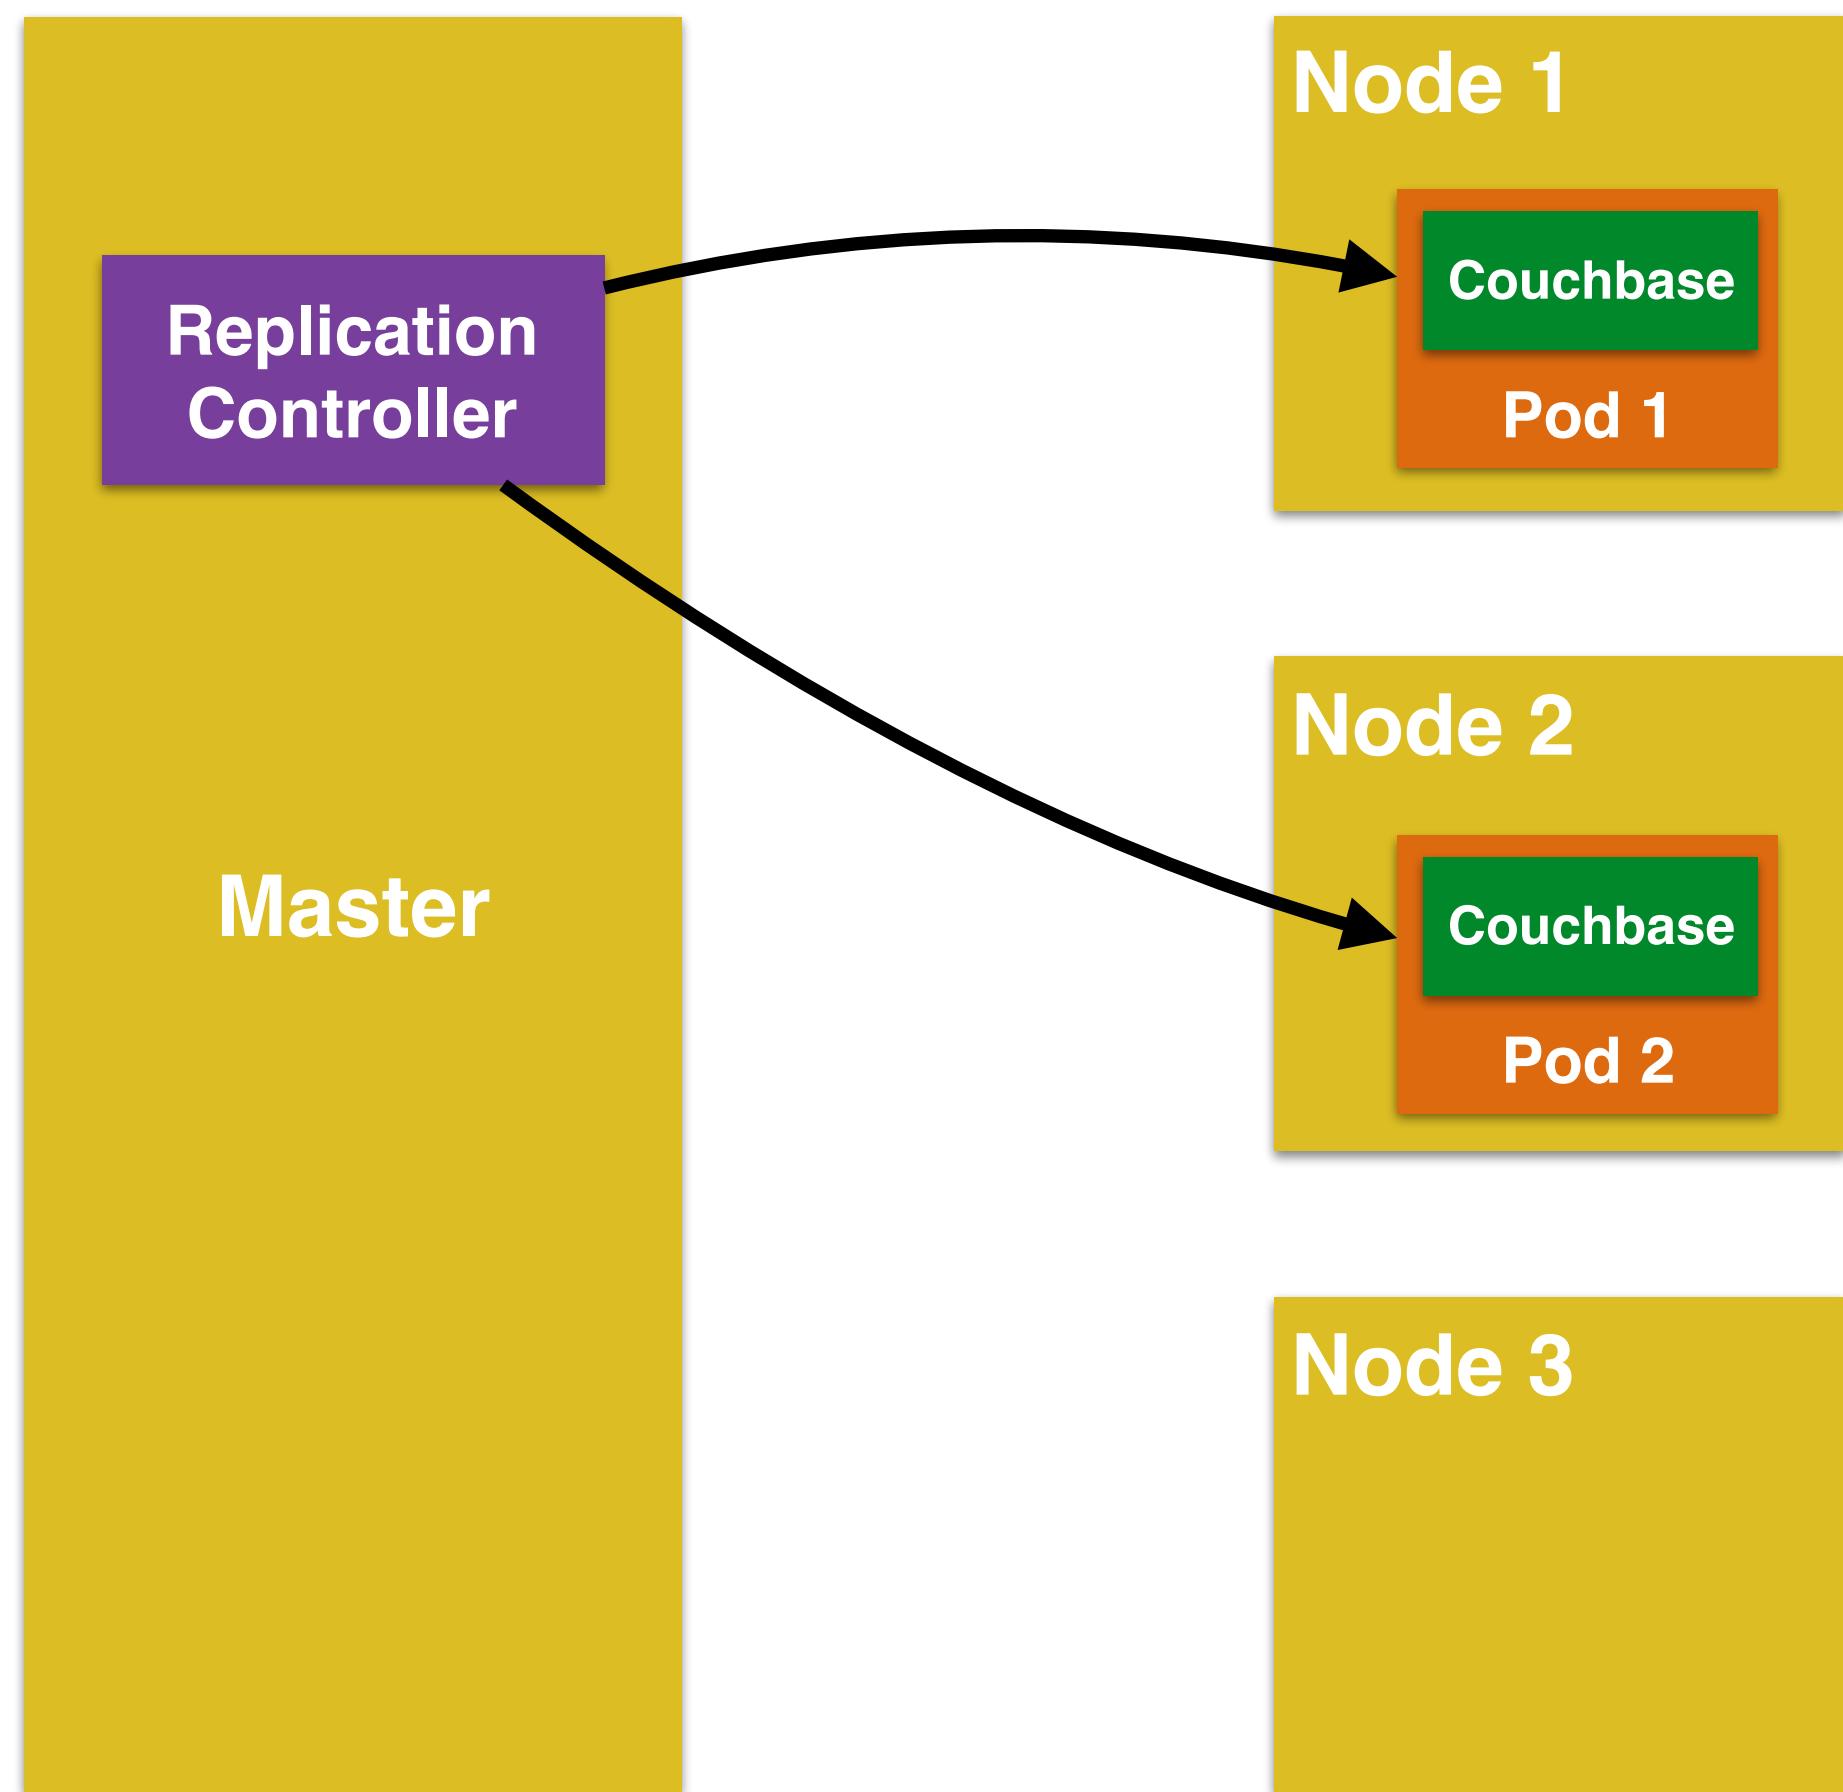

Replication Controller

- Ensures that a specified number of pod "replicas" are running
 - Pod templates are cookie cutters
 - Rescheduling
 - Manual or auto-scale replicas
 - Rolling updates
- Recommended to wrap a Pod or Service in a RC
- Only appropriate for Pods with `Restart=Always` policy (default)

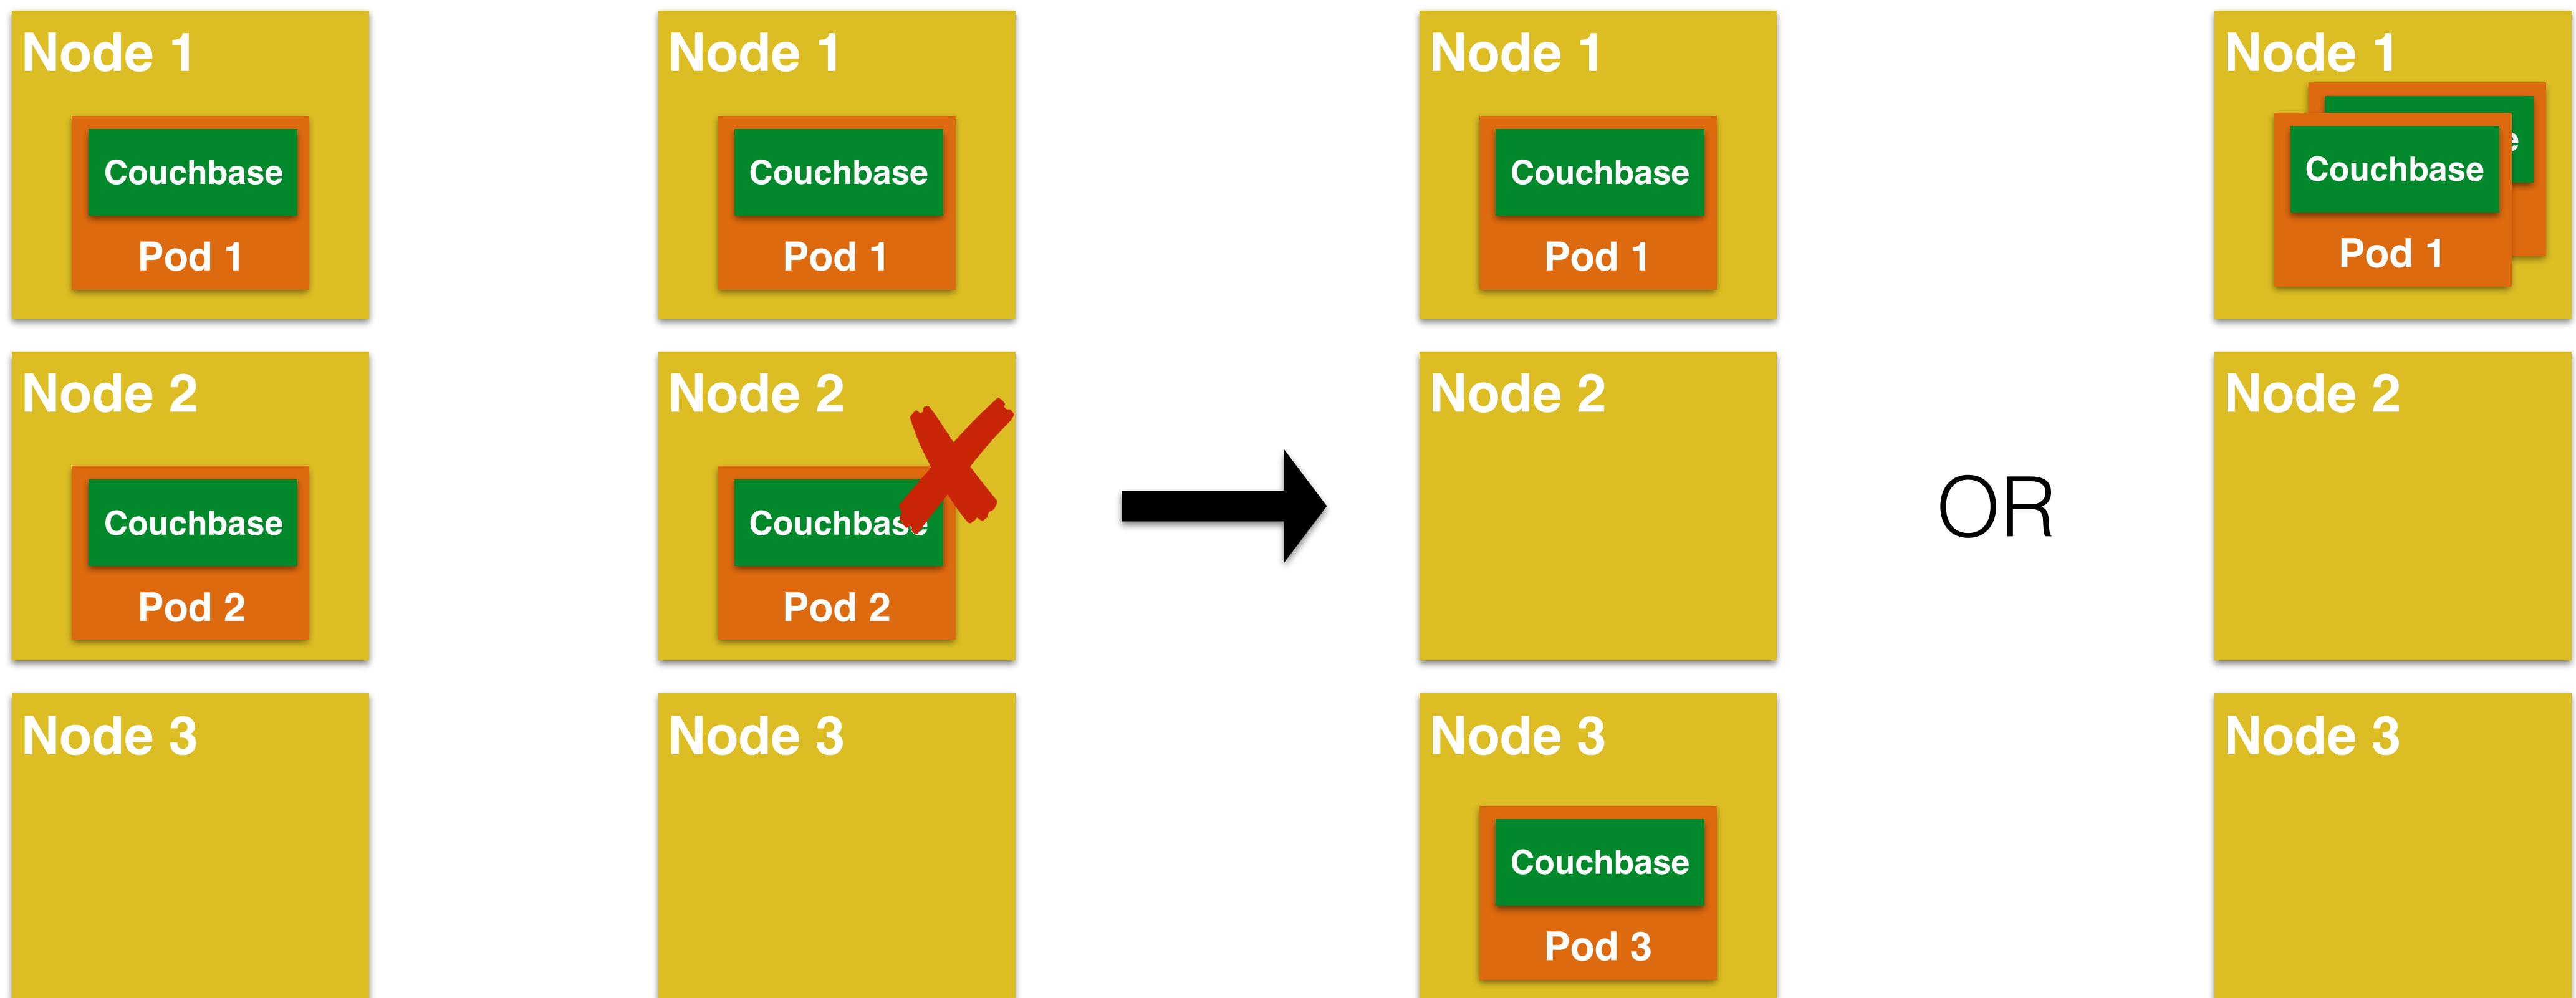

Replication Controller Configuration

```
1  apiVersion: v1
2  kind: ReplicationController
3  metadata:
4    name: wildfly-rc
5    labels:
6      name: wildfly
7      context: docker-k8s-lab
8  spec:
9    replicas: 1
10   template:
11     metadata:
12       labels:
13         name: wildfly
14     spec:
15       containers:
16         - name: wildfly-rc-pod
17           image: arungupta/wildfly-mysql-javaee7:k8s
18           ports:
19             - containerPort: 8080
```

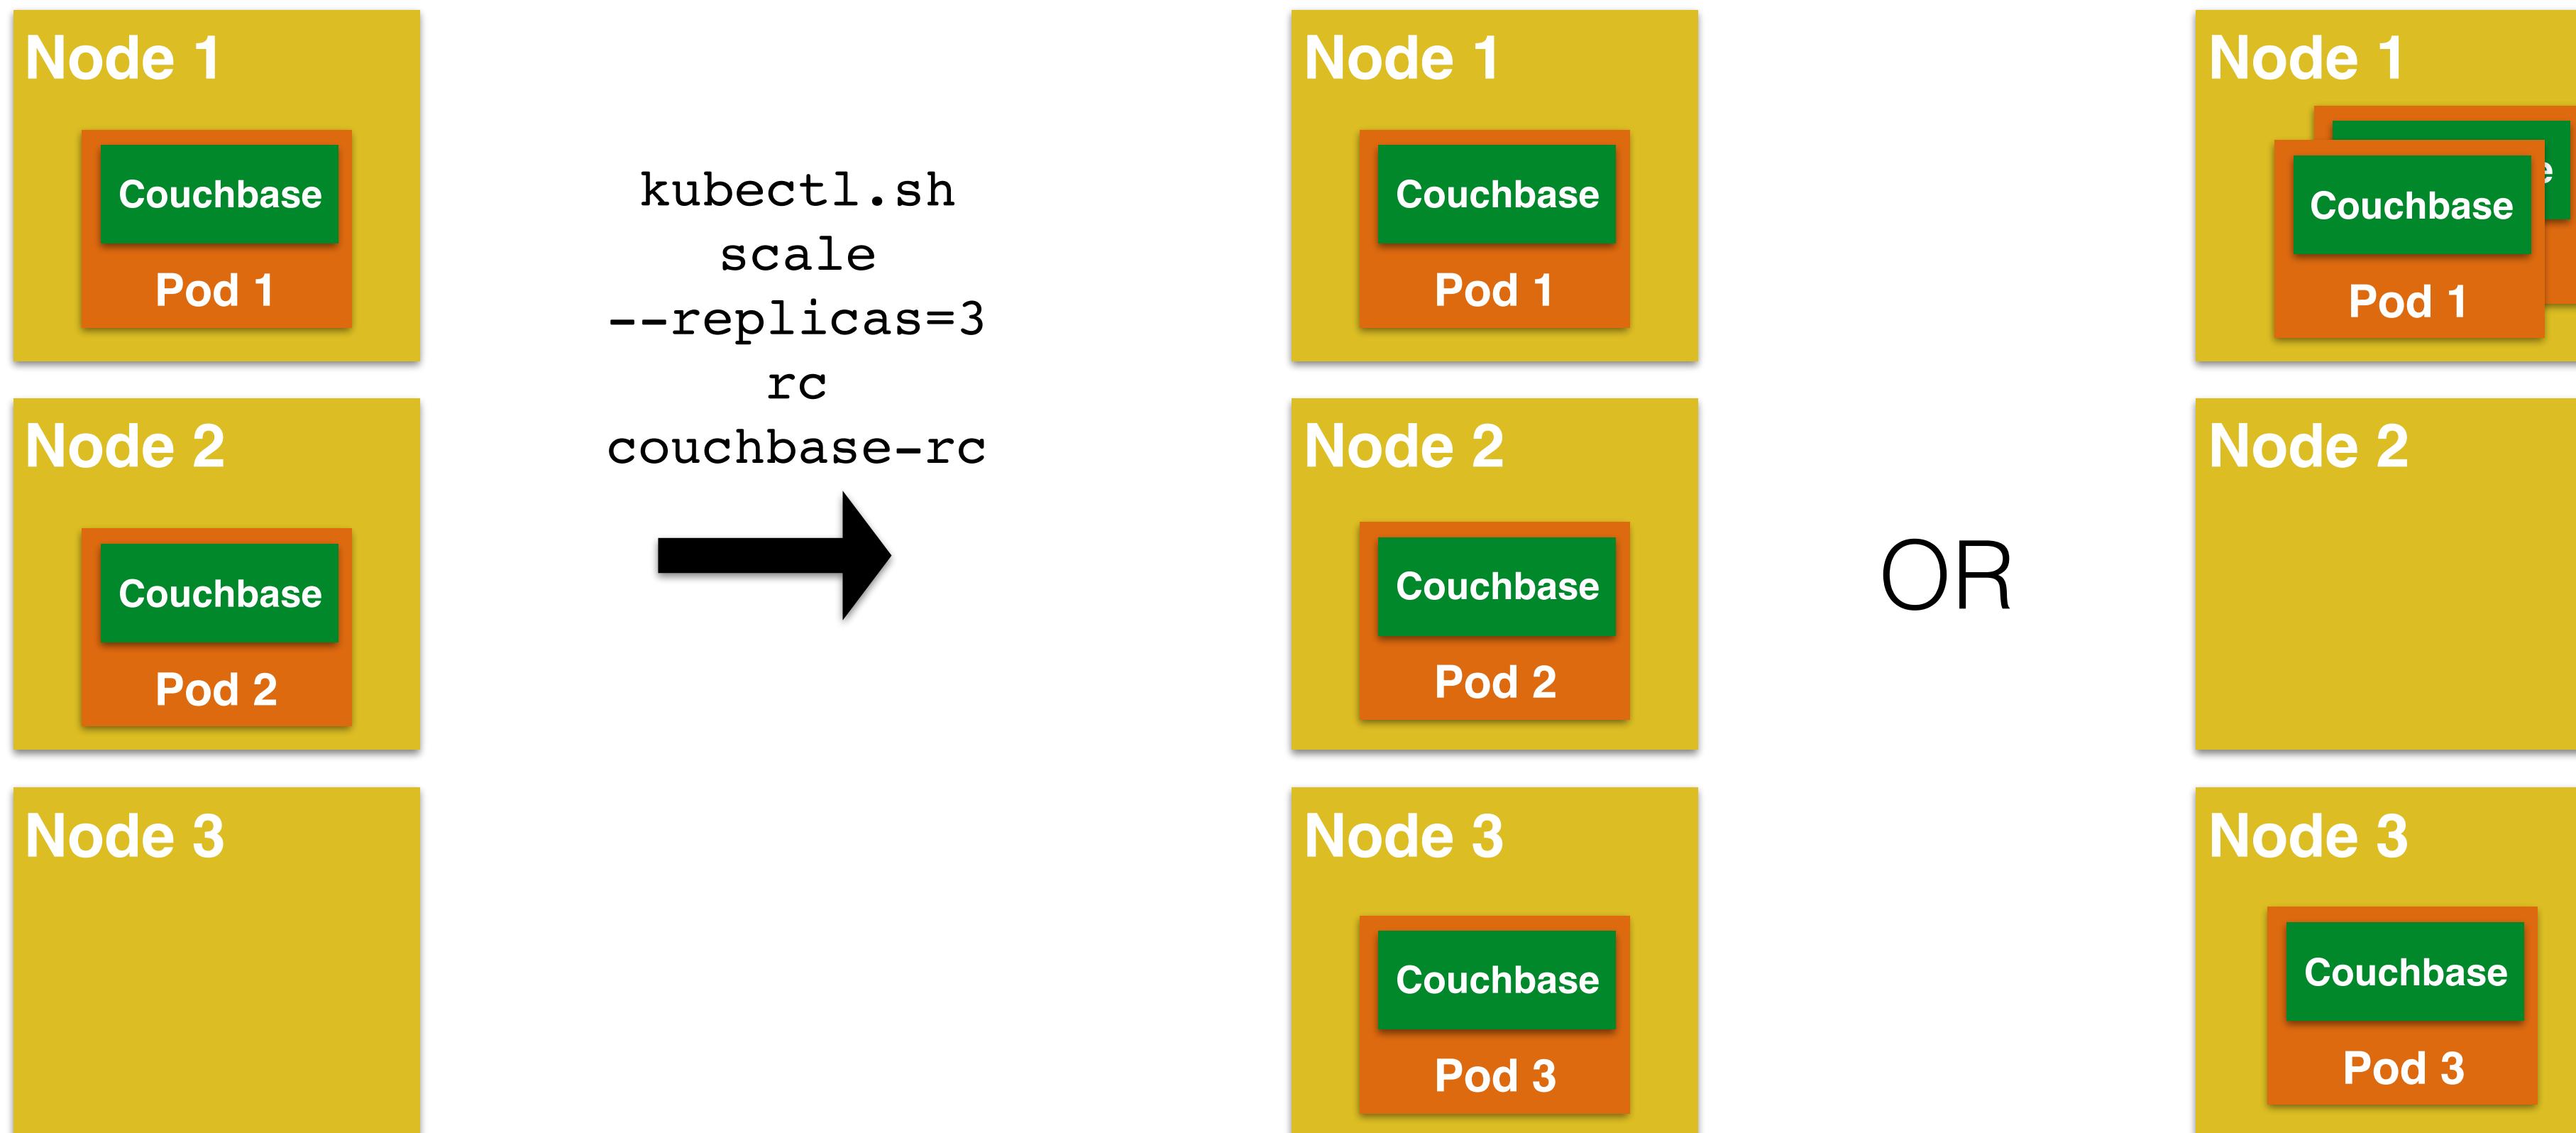

Replication Controller

Replication Controller: Automatic Rescheduling

Replication Controller: Scaling

Sample Production Deployment

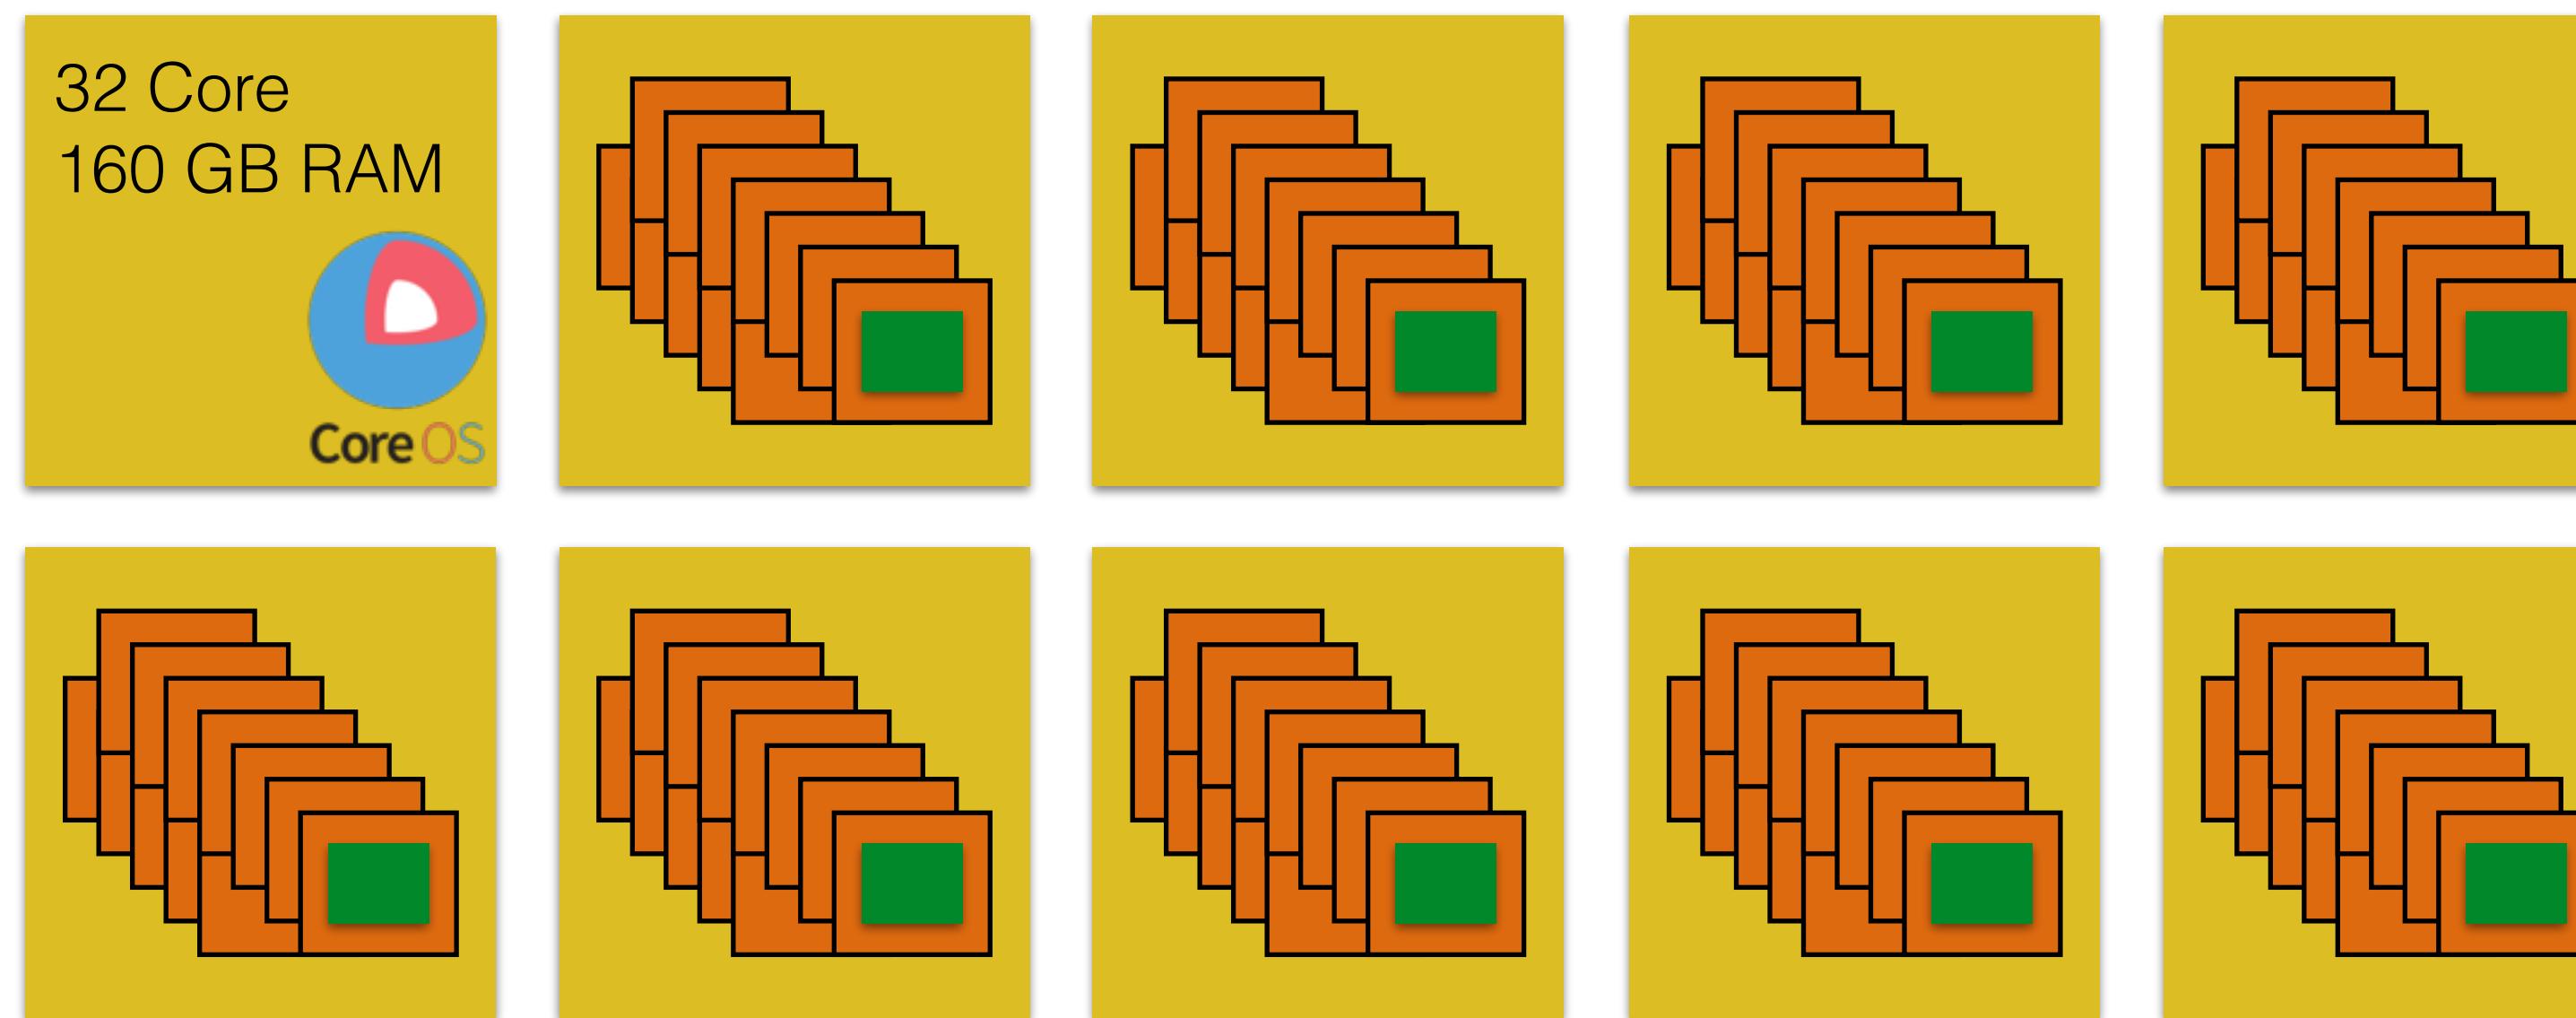

- www.wombatsoftware.de
- shopadvisors.de: E-commerce optimization and monitoring tools for increase of sales

WOMBAT
SOFTWARE

Sample Production Deployment

Load	Containers
Normal	400
Peak	600

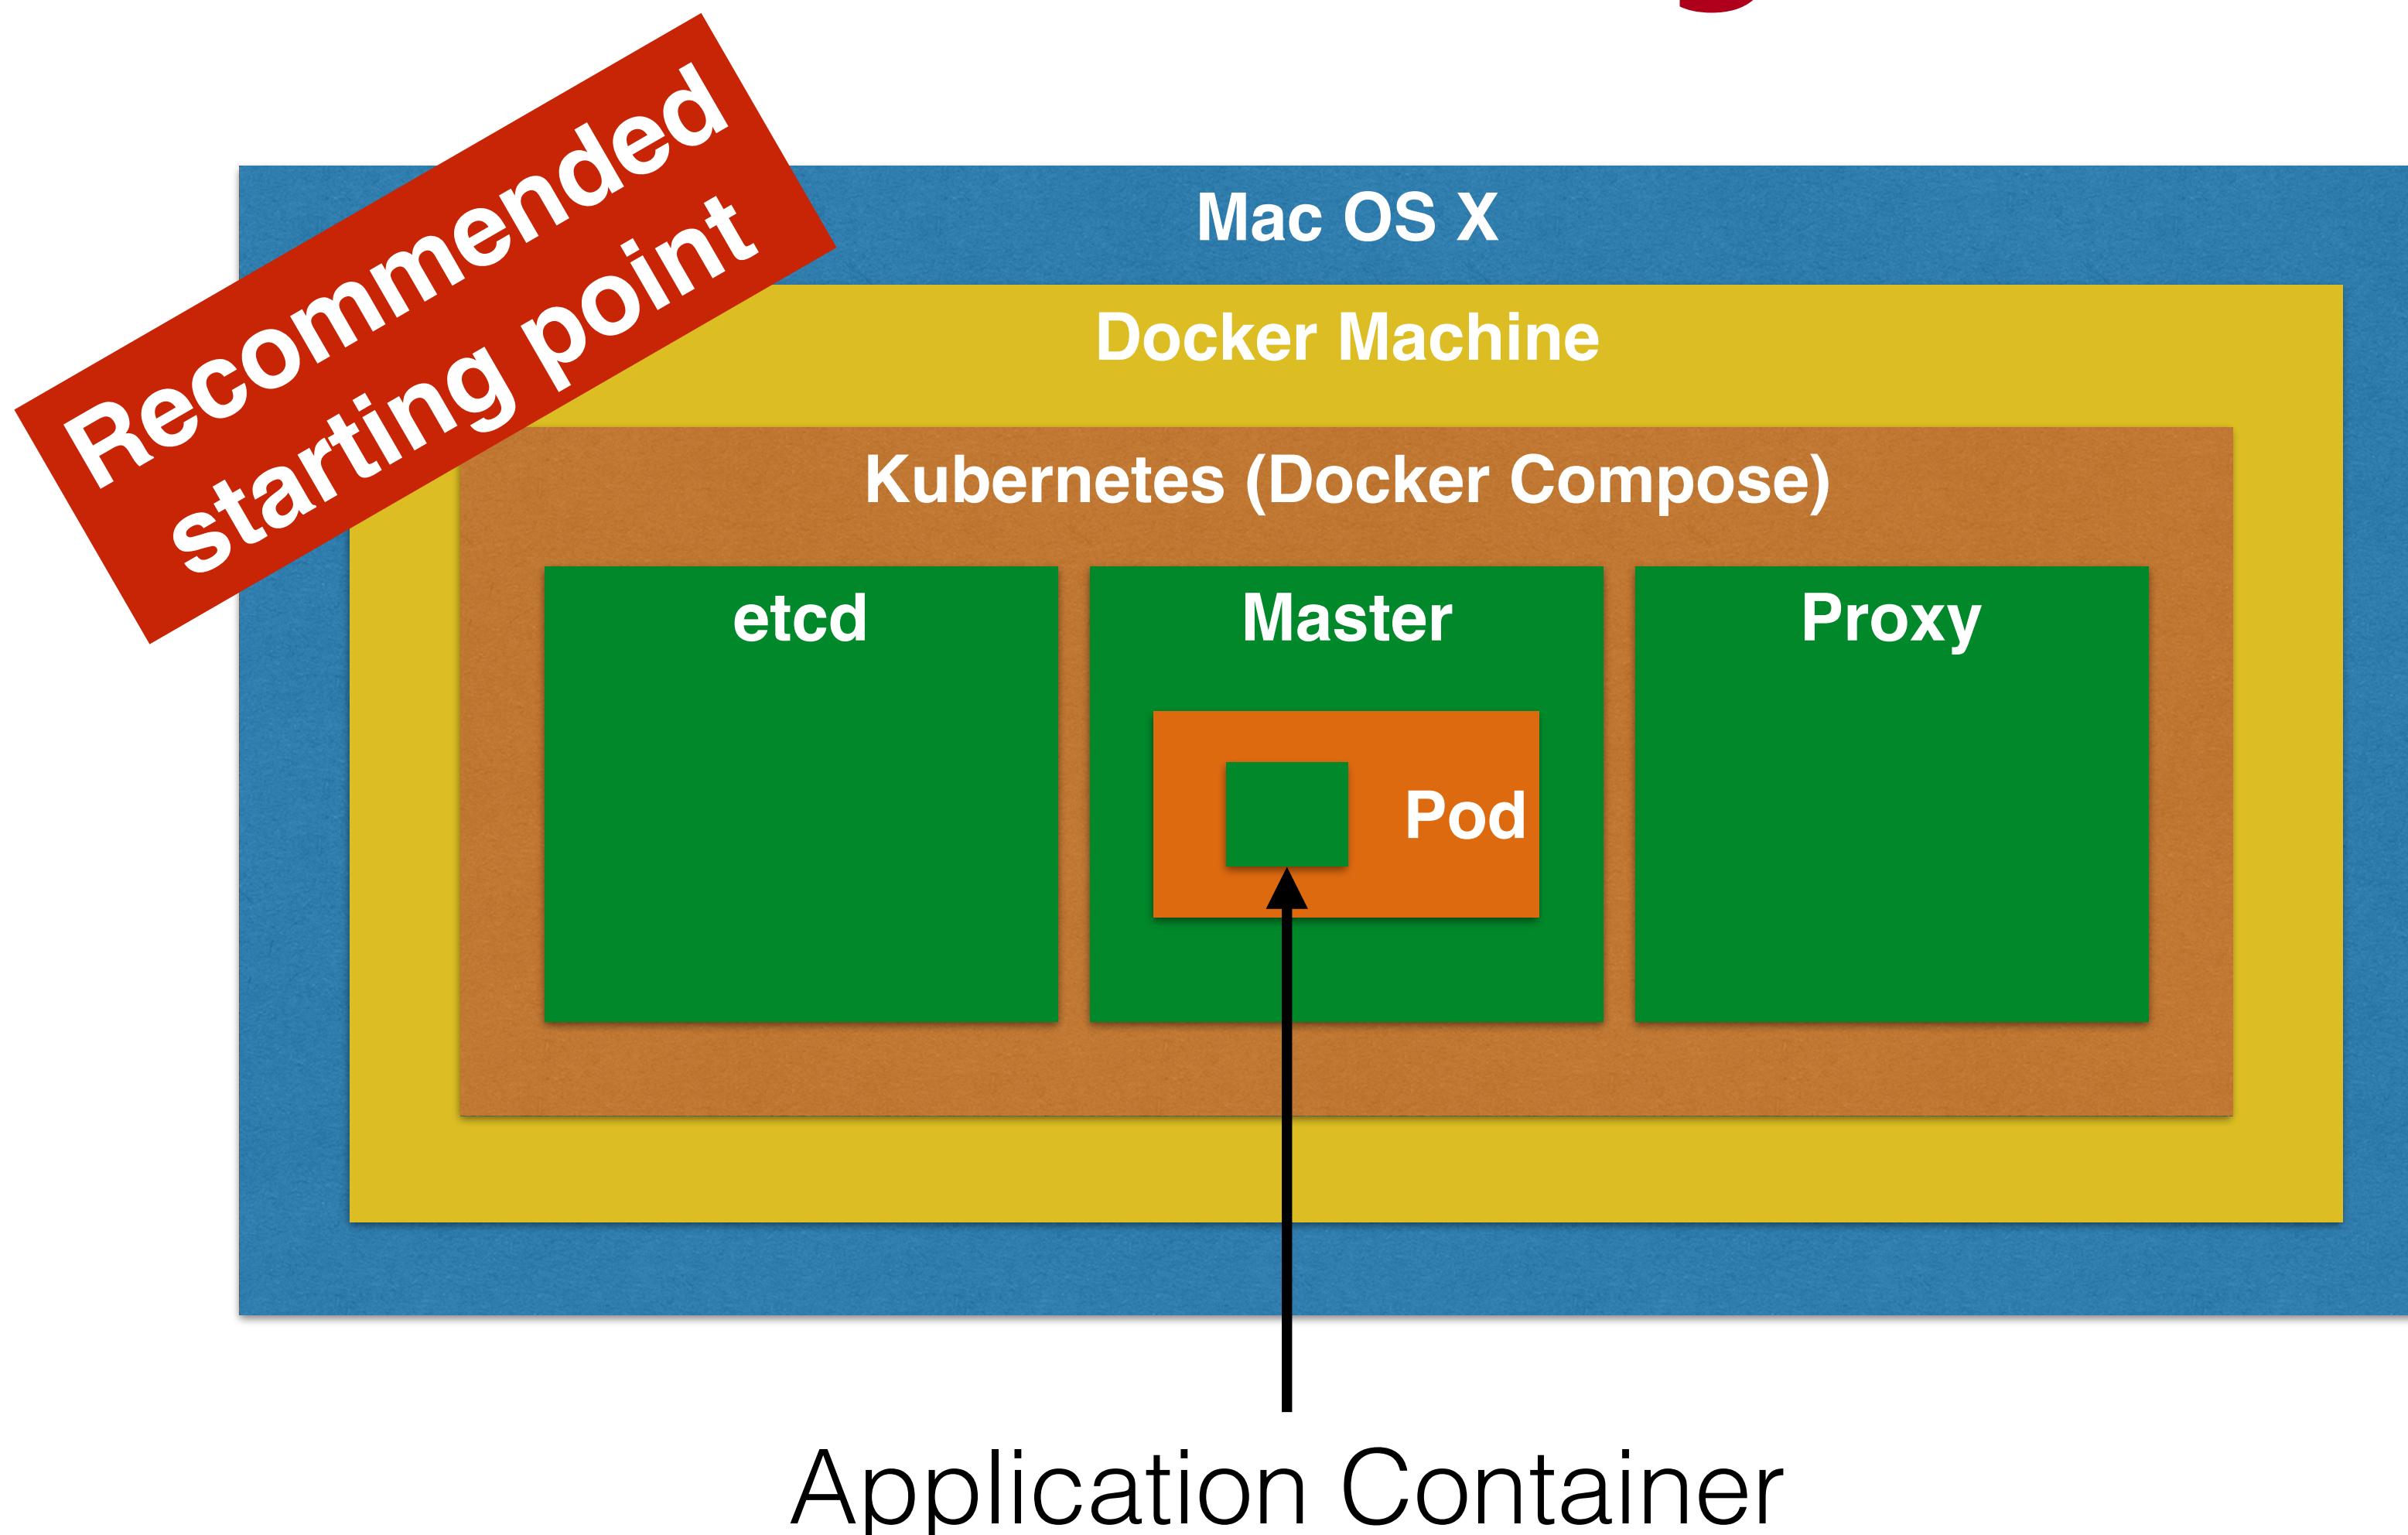

Health Checks

- Restarts Pod, if wrapped in RC
- Application-level health checks
 - HTTP
 - Container Exec
 - TCP Socket
- Health checks performed by Kubelet

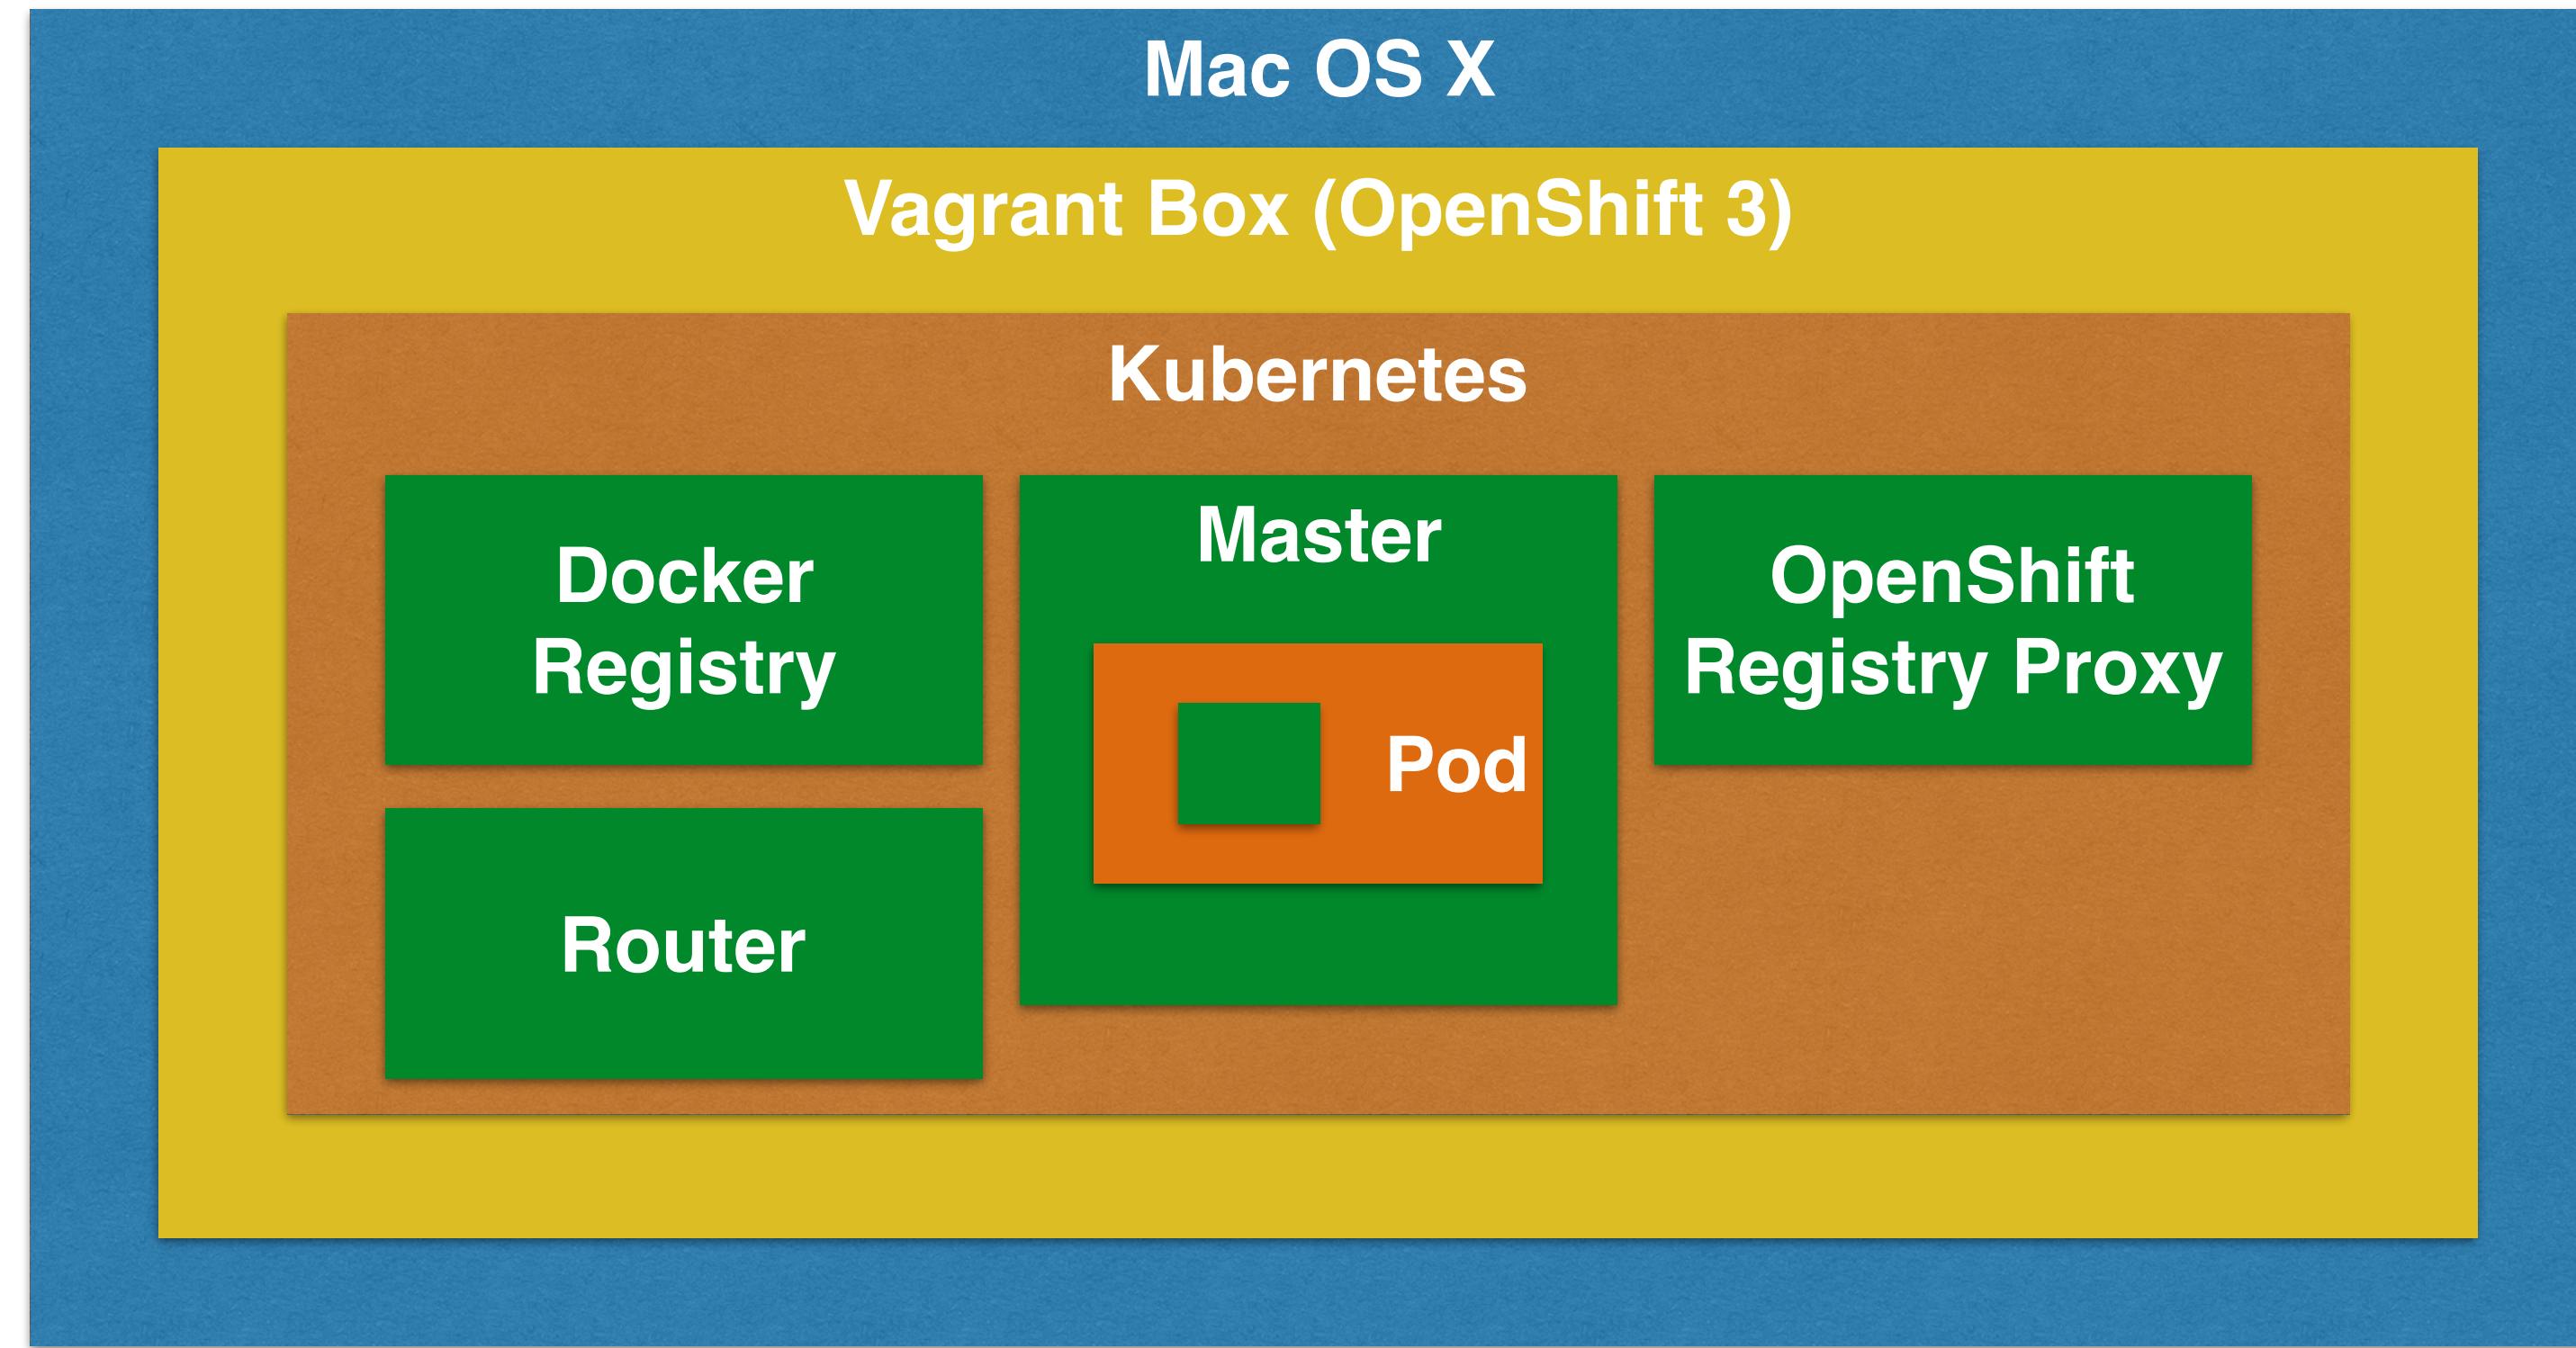

Kubernetes using Docker

```
1 etcd:
2   image: gcr.io/google_containers/etcd:2.0.9
3   net: "host"
4   entrypoint: /usr/local/bin/etcd --addr=127.0.0.1:4001 --bind-addr=0.0.0.0:4001 --data-dir=/var/lib/etcd
5 master:
6   image: gcr.io/google_containers/hyperkube:v0.21.2
7   net: "host"
8   volumes:
9     - /var/run/docker.sock:/var/run/docker.sock
10  entrypoint: /hyperkube kubelet --api_servers=http://localhost:8080 --v=2 --address=0.0.0.0 --port=8080
11 proxy:
12   image: gcr.io/google_containers/hyperkube:v0.21.2
13   net: "host"
14   privileged: true
15   entrypoint: /hyperkube proxy --master=http://127.0.0.1:8080 --v=2
```

Kubernetes using Docker

OpenShift 3
